The most up-to-date Argus Base Oils methodology is available on www.argusmedia.com
Methodology overview

Methodology rationale
Argus strives to construct methodologies that reflect the way the market trades. Argus aims to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, the specific currencies, volume units, locations and other particulars of an assessment are determined by industry conventions.

In the base oils market, Argus publishes physical market prices in the open market, and refiners’ posted prices as laid out in the specifications and methodology guide. Argus uses the trading period deemed by Argus to be most appropriate, in consultation with industry, to capture market liquidity.

In order to be included in the assessment process, deals must meet the minimum volume, delivery, timing and specification requirements in our methodology. In illiquid markets, and in other cases where deemed appropriate, Argus assesses the range within which product could have traded by applying a strict process outlined later in this methodology.

Survey process
Argus price assessments are informed by information received from a wide cross section of market participants, including producers, consumers and intermediaries. Argus reporters engage with the industry by proactively polling participants for market data. Argus will contact and accept market data from all credible market sources including front and back office of market participants and brokers. Argus will also receive market data from electronic trading platforms and directly from the back offices of market participants. Argus will accept market data by telephone, instant messenger, email or other means.

Argus encourages all sources of market data to submit all market data to which they are a party that falls within the Argus stated methodological criteria for the relevant assessment. Argus encourages all sources of market data to submit transaction data from back office functions.

Throughout all markets, Argus is constantly seeking to increase the number of companies willing to provide market data. Reporters are mentored and held accountable for expanding their pool of contacts. The number of entities providing market data can vary significantly from day to day based on market conditions.

For certain price assessments identified by local management, if more than 50pc of the market data involved in arriving at a price assessment is sourced from a single party the supervising editor will engage in an analysis of the market data with the primary reporter to ensure that the quality and integrity of the assessment has not been affected.

Market data usage
In each market, Argus uses the methodological approach deemed to be the most reliable and representative for that market. Argus will utilise various types of market data in its methodologies, to include:

- Transactions
- Bids and offers
- Other market information, to include spread values between grades, locations, timings, and many other data.

In many markets, the relevant methodology will assign a relatively higher importance to transactions over bids and offers, and a relatively higher importance to bids and offers over other market information. Certain markets however will exist for which such a hierarchy would produce unreliable and non-representative price assessments, and so the methodology must assign a different relative importance in order to ensure the quality and integrity of the price assessment. And even in markets for which the hierarchy normally applies, certain market situations will at times emerge for which the strict hierarchy would produce non-representative prices, requiring Argus to adapt in order to publish representative prices.

Verification of transaction data
Reporters carefully analyse all data submitted to the price assessment process. These data include transactions, bids, offers, volumes, counterparties, specifications and any other information that contributes materially to the determination of price. This high level of care described applies regardless of the methodology employed. Specific to transactions, bids, and offers, reporters seek to verify the price, the volume, the specifications, location basis, and counterparty. In some transactional average methodologies, reporters also examine the full array of transactions to match counterparties and arrive at a list of unique transactions.

Several tests are applied by reporters in all markets to transactional data to determine if it should be subjected to further scrutiny. If a transaction has been identified as failing such a test, it will receive further scrutiny. For assessments used to settle derivatives and for many other assessments, Argus has established internal procedures that involve escalation of inquiry within the source’s company and escalating review within Argus management. Should this process determine that a transaction should be excluded from the price assessment process, the supervising editor will initiate approval and, if necessary, documentation procedures.

Primary tests applied by reporters
- Transactions not transacted at arm’s length, including deals between related parties or affiliates.
- Transaction prices that deviate significantly from the mean of all transactions submitted for that day.
- Transaction prices that fall outside of the generally observed lows and highs that operated throughout the trading day.
- Transactions that are suspected to be a leg of another transaction or in some way contingent on an unknown transaction.
- Single deal volumes that significantly exceed the typical transaction volume for that market.
- Transaction details that are identified by other market participants as being for any reason potentially anomalous and perceived by Argus to be as such.
- Transaction details that are reported by one counterparty differently than the other counterparty.
- Any transaction details that appear to the reporter to be illogi-
significant narrow the band within which a commodity can be offered. Applying these valuation metrics along with sound judgment to internally assess value prior to entering the market with a bid or offer, metrics mirror the process used by physical commodity traders and uses widely accepted valuation metrics. These evaluation metrics include the following:

Relative value transactions
Frequently transactions occur which instead of being an outright purchase or sale of a single commodity, are instead exchanges of commodities. Such transactions allow reporters to value less liquid markets against more liquid ones and establish a strong basis for the exercise of judgment.

- Exchange one commodity for a different commodity in the same market at a negotiated value.
- Exchange delivery dates for the same commodity at a negotiated value.
- Exchange a commodity in one location for the same commodity at another location at a negotiated value.

Bids and offers
If a sufficient number of bids and offers populate the market, then in most cases the highest bid and the lowest offer can be assumed to define the boundaries between which a deal could be transacted.

Comparative metrics
The relative values between compared commodities are readily discussed in the market and can be discovered through dialogue with market participants. These discussions are the precursor to negotiation and conclusion of transactions.

- Comparison to the same commodity in another market centre.
- Comparison to a more actively traded but slightly different specification commodity in the same market centre.
- Comparison to the same commodity traded for a different delivery timing.
- Comparison to the commodity’s primary feedstock or primary derived product(s).
- Comparison to trade in the same commodity but in a different modality (as in barge versus oceangoing vessel) or in a different total volume (as in full cargo load versus partial cargo load).

Volume minimums and transaction data thresholds
Argus typically does not establish thresholds strictly on the basis of a count of transactions, as this could lead to unreliable and non-representative assessments and because of the varying transportation infrastructure found in all commodity markets. Instead, minimum volumes are typically established which may apply to each transaction accepted, to the aggregate of transactions, to transactions which set a low or high assessment or to other volumetrically relevant parameters.

For price assessments used to settle derivatives, Argus will seek to establish minimum transaction data thresholds and when no such threshold can be established Argus will explain the reasons. These thresholds will often reflect the minimum volumes necessary to produce a transaction-based methodology, but may also establish
minimum deal parameters for use by a methodology that is based primarily on judgment.

Should no transaction threshold exist, or should submitted data fall below this methodology’s stated transaction data threshold for any reason, Argus will follow the procedures outlined elsewhere in this document regarding the exercise of judgment in the price assessment process.

Swaps and forwards markets
Argus publishes forward assessments for numerous markets. These include forward market contracts that can allow physical delivery and swaps contracts that swap a fixed price for the average of a floating published price. Argus looks at forward swaps to inform physical assessments but places primary emphasis on the physical markets.

Publications and price data
Argus base oil prices are published in the Argus Base Oils report. The price data are available independent of the text-based report in electronic files that can feed into various databases. These price data are also supplied through various third-party data integrators. The Argus website also provides access to prices, reports and news with various web-based tools. All Argus prices are kept in a historical database and available for purchase. Contact your local Argus office for information.

A publication schedule is available at www.argusmedia.com

 Corrections to assessments
Argus will on occasion publish corrections to price assessments after the publication date. We will correct errors that arise from clerical mistakes, calculation errors, or a misapplication of our stated methodology. Argus will not retroactively assess markets based on new information learned after the assessments are published. We make our best effort to assess markets based on the information we gather during the trading day assessed.

Ethics and compliance
Argus operates according to the best practices in the publishing field, and maintains thorough compliance procedures throughout the firm. We want to be seen as a preferred provider by our subscribers, who are held to equally high standards, while at the same time maintaining our editorial integrity and independence. Argus has a strict ethics policy that applies to all staff. The policy can be found on our website at www.argusmedia.com. Included in this policy are restrictions against staff trading in any energy commodity or energy related stocks, and guidelines for accepting gifts. Argus also has strict policies regarding central archiving of email and instant messenger communication, maintenance and archiving of notes, and archiving of spreadsheets and deal lists used in the price assessment process. Argus publishes prices that report and reflect prevailing levels for open-market arms length transactions (please see the Argus Global Compliance Policy for a detailed definition of arms length).

Consistency in the assessment process
Argus recognises the need to have judgment consistently applied by reporters covering separate markets, and by reporters replacing existing reporters in the assessment process. In order to ensure this consistency, Argus has developed a programme of training and oversight of reporters. This programme includes:

- A global price reporting manual describing among other things the guidelines for the exercise of judgment.
- Cross-training of staff between markets to ensure proper holiday and sick leave backup. Editors that float between markets to monitor staff application of best practices.
- Experienced editors oversee reporting teams are involved in daily mentoring and assisting in the application of judgment for illiquid markets.
- Editors are required to sign-off on all price assessments each day, thus ensuring the consistent application of judgment.

Review of methodology
The overriding objective of any methodology is to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, Argus editors and reporters are regularly examining our methodologies and are in regular dialogue with the industry in order to ensure that the methodologies are representative of the market being assessed. This process is integral with reporting on a given market. In addition to this ongoing review of methodology, Argus conducts reviews of all of its methodologies and methodology documents on at least an annual basis.

Argus market report editors and management will periodically and as merited initiate reviews of market coverage based on a qualitative analysis that includes measurements of liquidity, visibility of market data, consistency of market data, quality of market data and industry usage of the assessments. Report editors will review:

- Appropriateness of the methodology of existing assessments
- Termination of existing assessments
- Initiation of new assessments

The report editor will initiate an informal process to examine viability. This process includes:

- Informal discussions with market participants
- Informal discussions with other stakeholders
- Internal review of market data

Changes to methodology
Formal proposals to change methodologies typically emerge out of the ongoing process of internal and external review of the methodologies. Formal procedures for external consultation regarding material changes to existing methodologies will be initiated with an
announcement of the proposed change published in the relevant Argus report. This announcement will include:

- Details on the proposed change and the rationale
- Method for submitting comments with a deadline for submissions
- For prices used in derivatives, notice that all formal comments will be published after the given consultation period unless submitter requests confidentiality

Argus will provide sufficient opportunity for stakeholders to analyse and comment on changes, but will not allow the time needed to follow these procedures to create a situation wherein unrepresentative or false prices are published, markets are disrupted, or market participants are put at unnecessary risk. Argus will engage with industry throughout this process in order to gain acceptance of proposed changes to methodology. Argus cannot however guarantee universal acceptance and will act for the good order of the market and ensure the continued integrity of its price assessments as an overriding objective.

Following the consultation period, Argus management will commence an internal review and decide on the methodology change. This will be followed by an announcement of the decision, which will be published in the relevant Argus report and include a date for implementation. For prices used in derivatives, publication of stakeholders’ formal comments that are not subject to confidentiality and Argus’ response to those comments will also take place.

**Pricing procedure**

Base oil price assessments are based on two elements – a survey of market participants and a volume-weighted average of any trades in the past week which fit the standard industry specifications listed below and which Argus has been able to verify. The final price is based on an average of the survey value and the volume-weighted trade value. In the absence of transactions, the assessment will be based on the market survey. This final price is the midpoint price between the published low and high price. Argus applies editorial judgment to arrive at an intelligent assessment of the spread between the low and high price.

Information on transactions, bids and offers that lie outside the specifications of timing, size, location and quality will be taken into account but information that lies within the listed specifications of the assessment will be given most weight. Argus applies editorial judgment to the surveys and will eliminate information that appears to be ‘off the consensus’ in its final assessment of the price.

**Price assessment schedule**

Argus Base Oils is published once a week, typically on Friday. A complete publishing schedule is available at [www.argusmedia.com](http://www.argusmedia.com).

A selection of forward prices is made available electronically to subscribers through Argus Direct and other means on the other working days of the week.

To be considered for inclusion in the assessments, trades must have been completed and other market information refer to conditions up to the times specified below. Market information reported after this time and referring to trade or market activity before this time may be considered for inclusion in the assessment.

**Currency conversion**

Currencies are converted using exchange rates from Ice Data Services as of 6pm UK time on Thursday.

Location: South Korea
Unit: US dollars/metric tonne
Timing: loading 15-30 days forward from date of assessment
Volume minimum: 1,000t
Timestamp: 4.30pm Singapore time on Thursday

Ex-tank Singapore base oil reference prices
Assessments for ex-tank Singapore Group I SN 150, SN 600 and bright stock and Group II N150 and N500 are of term prices for base oil buyers in Asia-Pacific. The prices are provided by base oil buyers in the ex-tank market. Argus confirms any price change with market participants. Prices are updated in the Argus report when the new prices take effect. Prices are published in US dollars/metric tonne.

Asia-Pacific SN 500 forward prices
The implied forward base oil price required to maintain its existing profit margin relative to Ice gasoil futures.

Argus assesses forward base oil prices by applying the intermonth premiums or discounts of the 30-day average of each forward month for gasoil futures to the fob Asia export SN 500 physical base oil price as published in Argus Base Oils.

By using a 30-day average of the gasoil price, the effects of sharp price fluctuations are reduced, and an element of historic pricing is included, reflecting the tendency for base oils prices to lag a change in fossil fuel prices. The 30-day average gasoil price is calculated using the gasoil futures settlement price published by the Intercontinental Exchange (Ice) over the 30 calendar days to the base oil forward swap assessment day.

Prices are published in US dollars/tonne.

Forward prices are published for three consecutive months and two quarters forward. The last day of publication of the first month of the forward price table will be the day before the expiry date of the front-month gasoil futures contract published by Ice.

The forward months will roll the day after the last day of publication of the first month of the forward price table. The last day of publication of the first calendar quarter of the forward strips will be the day before the expiry date of the first Ice gasoil month in a calendar quarter (January, April, July and October).

Specifications are identical to those of the SN 500 fob Asia spot price assessment.
Asia-Pacific SN 500 forward premium to gasoil
The implied forward profitability of base oils relative to Ice gasoil futures.

Argus assesses the forward base oil premium to gasoil by comparing the physical fob Asia export SN 500 base oils price published in Argus Base Oils with the 30-day average of each forward month for gasoil futures.

The 30-day average gasoil price is calculated using the gasoil futures settlement price published by the Intercontinental Exchange (Ice) over the 30 calendar days to the base oil forward premium assessment day.

Prices are published in US dollars/tonne.

Forward base oil premiums to gasoil are published for three consecutive months and two quarters forward.

The last day of publication of the first month of the forward premium table will be the day before the expiration date of the front-month gasoil futures contract published by Ice.

The forward months will roll the day after the last day of publication of the first month of the forward price table.

The last day of publication of the first calendar quarter of the forward strips will be the day before the expiry date of the first Ice gasoil month in a calendar quarter (January, April, July and October).

Specifications are identical to those of the SN 500 fob Asia spot price assessment

Crude
The crude oil price is an important indicator of the future direction of base oils prices. A comparison of the crude price with the base oils price illustrates the effect of the past week’s change in price on the profitability of base oils relative to crude oil.

Dubai crude front month
The physical price of Dubai crude for loading two months forward, as published in Argus Crude on the day corresponding with the base oils assessment.

Prices are published in US dollars/barrel.

See the Argus Crude methodology.

SN 500 premium to Dubai crude
The premium is published in US dollars/barrel.

The price represents the premium of SN 500 fob Asia over front-month Dubai crude.

The conversion factor used for SN 500 is 7.1 bl to a metric tonne.

Oil products
Argus includes the benchmark price for regional gasoil to show the profitability of that product relative to base oils.

Oil products prices are taken from Argus Asia-Pacific Products on the day corresponding with the base oils assessment.

Oil products prices are published in US dollars/barrel.

See the Argus Asia-Pacific Products methodology.

Singapore 0.05% gasoil
Front-month swap, fob Singapore

Gasoil premium to Dubai crude
The premium of Singapore 0.05% sulphur gasoil swaps to Dubai crude.

SN 500 premium to gasoil
The premium of SN 500 fob Asia over Singapore 0.05% gasoil.

Prices are published in US dollars/barrel.

The conversion rate for SN 500 is 7.1 bl to a metric tonne.

Northeast Asia

Group I

SN 150 cfr northeast Asia
Solvent neutral 150 (SN 150) base oil
Location: China, Japan, South Korea and Taiwan

**Basis:** delivery into India  
**Location:** Mumbai  
**Unit:** US dollars/metric tonne  
**Timing:** delivered 15-45 days forward from date of assessment  
**Volume minimum:** 1,000t  
**Specification:** viscosity index 85-94  
**Timestamp:** 4.30pm Singapore time on Thursday

### SN 500 (LVI) cfr India
Solvent neutral 500 (LVI) low viscosity index (LVI) base oil  
**Basis:** delivery into India  
**Location:** Mumbai  
**Unit:** US dollars/metric tonne  
**Timing:** delivered 15-45 days forward from date of assessment  
**Volume minimum:** 1,000t  
**Specification:** viscosity index 85-94  
**Timestamp:** 4.30pm Singapore time on Thursday

### Bright stock cfr India
Bright stock base oil  
**Basis:** delivery into India  
**Location:** Mumbai  
**Unit:** US dollars/metric tonne  
**Timing:** delivered 15-45 days forward from date of assessment  
**Volume minimum:** 1,000t  
**Timestamp:** 4.30pm Singapore time on Thursday

## Group II

### N70 cfr India
Neutral 70 (N70) base oil  
**Basis:** delivery into India  
**Location:** Mumbai

## Group III

### 4cst cfr India
4cst base oil  
**Location:** Mumbai  
**Unit:** US dollars/metric tonne  
**Timing:** delivered 15-45 days forward from date of assessment  
**Volume minimum:** 1,000t  
**Timestamp:** 4.30pm Singapore time on Thursday

### 6cst cfr India
6cst base oil  
**Location:** Mumbai  
**Unit:** US dollars/metric tonne  
**Timing:** delivered 15-45 days forward from date of assessment  
**Volume minimum:** 1,000t  
**Timestamp:** 4.30pm Singapore time on Thursday

### 8cst cfr India
8cst base oil  
**Location:** Mumbai  
**Unit:** US dollars/metric tonne  
**Timing:** delivered 15-45 days forward from date of assessment  
**Volume minimum:** 1,000t  
**Timestamp:** 4.30pm Singapore time on Thursday

# Domestic refinery prices
Group I and Group II prices are provided either directly or indirectly by Indian refiners.  
**Unit:** Indian rupees/litre, with conversion into US dollars/metric tonne  
The litres-to-tonnes conversion rates are listed below:

Prices are published for each of the below listed grades at Chennai and Mumbai.

### Mideast Gulf

#### Group I

**Bright stock ex-tank UAE**
- **Bright stock base oil**
- **Location:** Sharjah, Jebel Ali and Fujairah
- **Unit:** US dollars/metric tonne
- **Timing:** delivered 1-30 days forward from date of assessment
- **Volume minimum:** 20t
- **Timestamp:** 4.30pm Singapore time on Thursday

**SN 150 cfr UAE**
- **Solvent neutral 150 (SN 150) base oil**
- **Basis:** delivery into the United Arab Emirates (UAE)
- **Location:** Sharjah, Jebel Ali and Fujairah
- **Unit:** US dollars/metric tonne
- **Timing:** delivered 15-45 days forward from date of assessment
- **Volume minimum:** 1,000t
- **Timestamp:** 4.30pm Singapore time on Thursday

**SN 500 cfr UAE**
- **Solvent neutral 500 (SN 500) base oil**
- **Basis:** delivery into the United Arab Emirates (UAE)
- **Location:** Sharjah, Jebel Ali and Fujairah
- **Unit:** US dollars/metric tonne
- **Timing:** delivered 15-45 days forward from date of assessment
- **Volume minimum:** 1,000t
- **Timestamp:** 4.30pm Singapore time on Thursday

---

#### Group II

**N150 ex-tank UAE**
- **Neutral 150 (N150) base oil**
- **Location:** Sharjah, Jebel Ali and Fujairah
- **Unit:** US dollars/metric tonne
- **Timing:** loading 1-30 days forward from date of assessment
- **Volume minimum:** 20t
- **Timestamp:** 4.30pm Singapore time on Thursday

**N500 ex-tank UAE**
- **Neutral 500 (N500) base oil**
The primary assessment points are Sharjah, Jebel Ali and Fujairah
- **Unit:** US dollars/metric tonne
- **Timing:** loading 1-30 days forward from date of assessment
- **Volume minimum:** 20t
- **Timestamp:** 4.30pm Singapore time on Thursday

---

#### Group III

**4cst ex-tank UAE**
- **4cst base oil**
- **Location:** Sharjah, Jebel Ali and Fujairah
- **Unit:** US dollars/metric tonne
- **Timing:** loading 1-30 days forward from date of assessment
- **Volume minimum:** 20t
- **Timestamp:** 4.30pm Singapore time on Thursday

**6cst ex-tank UAE**
- **6cst base oil**
- **Location:** Sharjah, Jebel Ali and Fujairah
- **Unit:** US dollars/metric tonne
- **Timing:** loading 1-30 days forward from date of assessment
- **Volume minimum:** 20t
- **Timestamp:** 4.30pm Singapore time on Thursday

**8cst ex-tank UAE**
- **8cst base oil**
- **Location:** Sharjah, Jebel Ali and Fujairah
- **Unit:** US dollars/metric tonne
- **Timing:** loading 1-30 days forward from date of assessment
- **Volume minimum:** 20t
- **Timestamp:** 4.30pm Singapore time on Thursday
**Iranian export prices**

Sepahan Oil provides prices for Iranian SN 500 and SN 500+ base oil, rubber process oil, slack wax and paraffin wax direct to Argus. The prices are updated in the Argus report, which includes the effective date of the prices.

**Basis:** fob Bushehr (base oils), fob Bandar Abbas (rubber process oil, slack wax, paraffin wax)

**Unit:** US dollars/tonne

**SN 500 specification:** viscosity index minimum 95; viscosity at 100°C 11-12cst; flash point minimum 230°C; pour point ≤-9°C; colour maximum 1.5

**SN 500+ specification:** viscosity index minimum 95; viscosity at 100°C 11-12cst; pour point ≤-9°C; colour maximum 1.5

**Rubber process oil specification:** viscosity at 100°C 40-45cst; flash point minimum 240°C; pour point 24°C

**Crude**

The North Sea Dated crude oil price is an important indicator of the future direction of base oils prices in the region. A comparison of the crude price with the base oils price illustrates the effect of the past week’s change in price on the profitability of base oils relative to crude oil.

**North Sea Dated**

The North Sea Dated crude oil price as published in *Argus Crude* on the day corresponding with the base oils assessment. Prices are published in US dollars/barrel.

See the [Argus Crude methodology](#).

**SN 500 premium to North Sea Dated**

**Ice Brent front month**

The Ice Brent front-month contract price as published in Argus Crude on the day corresponding with the base oil assessment.

See the [Argus Crude methodology](#).

**Oil products**

Argus includes the regional benchmark price of vacuum gasoil to show the price of a key feedstock for base oils and heating oil and the effect of the change in that price on the profitability of base oils and heating oil. Argus also includes the regional price of heating oil to show the profitability of that product relative to crude oil and to base oils.

Oil products prices are taken from *Argus European Products* on the day corresponding with the base oils assessment. Oil products prices are published in US dollars/tonne. See the [Argus European Products methodology](#).

**Heating oil 0.1% barge**

German grade heating oil, fob Rotterdam

**VGO 0.5% barge**

Vacuum gasoil fob Rotterdam

**VGO 2% barge**

Vacuum gasoil fob Rotterdam

**Fuel oil 3.5% barge**

Fuel oil fob Rotterdam

**Straight run M-100 fuel oil cargo**

Russian straight-run M-100 fuel oil cif northwest Europe, standardised to Rotterdam

**Ice gasoil front month**

The Ice gasoil front-month contract price as published in Argus European Products on the day corresponding with the base oil assessment.

**Oil product price premiums**

The profitability of heating oil and SN 500 base oil by comparing their prices with each other and with feedstock vacuum gasoil. See the [Argus European Base Oils methodology](#) for more information.
• Heating oil premium to crude
• Heating oil premium to VGO 2%
• SN 500 premium to heating oil
• SN 500 premium to VGO 2%

Europe SN 150 and SN 500 forward prices
The implied forward base oil price required to maintain its existing profit margin relative to Ice gasoil futures.

Argus assesses forward base oil prices by applying the intermonth premiums or discounts of the 30-day average of each forward month for gasoil futures to the fob European export SN 150 and fob European export SN 500 physical base oil prices as published in Argus European Base Oils.

By using a 30-day average of the gasoil price, the effects of sharp price fluctuations are reduced, and an element of historic pricing is included, reflecting the tendency for base oils prices to lag a change in fossil fuel prices. The 30-day average gasoil price is calculated using the gasoil futures settlement price published by the Intercontinental Exchange (Ice) over the 30 calendar days to the base oil forward swap assessment day.

Prices are published in US dollars/tonne.

Forward prices are published for three consecutive months and two quarters forward.

The last day of publication of the first month of the forward price table will be the day before the expiry date of the front-month gasoil futures contract published by Ice.

The forward months will roll the day after the last day of publication of the first month of the forward price table.

The last day of publication of the first calendar quarter of the forward strips will be the day before the expiry date of the first Ice gasoil month in a calendar quarter (January, April, July and October). Specifications are identical to those of the SN 150 and SN 500 fob European export spot price assessments.

Russia and FSU
Argus Base Oils includes price assessments for several grades of Russian base oils, published in Argus European Base Oils.

See the Argus European Base Oils methodology for more information.

Group I
• SN 150 fob Baltic Sea
• SN 500 fob Baltic Sea
• SN 150 fob Black Sea
• SN 500 fob Black Sea

Group III
• 4cst cpt Posin

Group III (b)
• 4cst fob Baltic netback

SN 150 cpt Naushki
Solvent neutral 150 (SN 150) base oil
Basis: export cargoes on a cpt Naushki basis
Location: Naushki (Russian-Mongolian border)
Unit: US dollars/metric tonne
Timing: delivered 1-30 days forward from date of assessment
Volume minimum: 300t
Timestamp: 4.30pm London time on Thursday

SN 500 cpt Naushki
Solvent neutral 500 (SN 500) base oil
Basis: export cargoes on a cpt Naushki basis
Location: Naushki (Russian-Mongolian border)
Unit: US dollars/metric tonne
Timing: delivered 1-30 days forward from date of assessment
Volume minimum: 300t
Timestamp: 4.30pm London time on Thursday
**US**

Argus Base Oils includes price assessments for several grades of US base oils, published in Argus Americas Base Oils.

See the [Argus Americas Base Oils methodology](#) for more information.

**Group I bulk export prices**
- SN 150 fob US export
- SN 500 fob US export
- Bright stock fob US export

**Group II bulk export prices**
- N100 fob US export
- N220 fob US export
- N600 fob US export

**Domestic prices — Group I**
- SN 150 fob domestic US
- SN 500 fob domestic US
- Bright stock fob domestic US

**Domestic prices — Group II**
- N100 fob domestic US
- N220 fob domestic US
- N600 fob domestic US

**Domestic prices — Group III**
- 4cst fob domestic US
- 6cst fob domestic US
- 8cst fob domestic US

**US naphthenic base oils**

**Naphthenic domestic prices**
- Pale oil 60 fob domestic US
- Pale oil 100 fob domestic US
- Pale oil 500 fob domestic US
- Pale oil 2,000 fob domestic US

**Naphthenic bulk export prices**
- Pale oil 60 fob US export
- Pale oil 100 fob US export
- Pale oil 500 fob US export
- Pale oil 2,000 fob US export

**Crude**
The US crude oil futures price is an important indicator of the future direction of base oil prices in the region. A comparison of the crude price with the base oil price illustrates the effect of the past week’s change in price on the profitability of base oil relative to crude oil. Crude oil prices are taken from Argus reports on the day corresponding with the base oils assessment.

Crude oil prices are published in US dollars/barrel and US dollars/gallon.

**Nymex WTI crude front month**

**SN 500 premium to WTI**
The premium of SN 500 fob US export price over front-month WTI crude. Prices are published in US dollars/gallon and US dollars/barrel. The conversion factor used for SN 500 is 7.10 bl to a metric tonne.

**Argus Sour Crude Index (ASCI™)**
The value of US Gulf coast medium sour crude as published in Argus Crude. See the [Argus Sour Crude Index™ methodology](#).

**SN 500 premium to ASCI™**
The premium of SN 500 fob US export price over the Argus Sour Crude Index. Prices are published in US dollars/gallon and US dollars/barrel. The conversion factor used for SN 500 is 7.10 bl to a metric tonne.

**Oil products**
Argus includes the regional benchmark price of vacuum gasoil to show the price of a key feedstock for base oils and heating oil and the effect of the change in that price on the profitability of base oils and heating oil. Argus also includes the regional price of heating oil to show the profitability of that product relative to crude oil and to base oils.

Oil products prices are taken from Argus US Products on the day corresponding with the base oils assessment.

Oil products prices are published in US dollars/gallon and US dollars/barrel.

**NYH heating oil barge**
See the Argus US Products methodology.

**Low sulphur vacuum gasoil 0.5% cargo**
See the Argus US Products methodology.

**High sulphur vacuum gasoil 2% cargo**
See the Argus US Products methodology.

**USGC 10ppm diesel 62 cargo**
See the Argus US Products methodology.

**Oil product price premiums**
The profitability of SN 500 base oils and heating oil versus each other and versus feedstock vacuum gasoil.

**Heating oil premium to crude**
The premium of New York Harbour heating oil barges to WTI crude.

**Heating oil premium to VGO 2%**
The premium of New York Harbour heating oil barges over high sulphur vacuum gasoil.

**SN 500 premium to heating oil**
The premium of SN 500 fob US export over New York Harbor heating oil barges.
SN 500 premium to VGO 2%
The premium of SN 500 fob US export over high sulphur vacuum gasoil.

US SN 500 forward prices
The implied forward base oil price required to maintain its existing profit margin relative to Nymex heating oil futures.

Argus assesses forward base oil prices by applying the intermonth premiums or discounts of the 30-day average of each forward month for US heating oil futures to the SN 500 fob US export physical base oil price as published in Argus Base Oils.

By using a 30-day average heating oil price, the effects of sharp price fluctuations are reduced, and an element of historic pricing is included, reflecting the tendency for base oil prices to lag a change in fossil fuel prices. The 30-day average heating oil price is calculated using the heating oil futures settlement price published by the New York Mercantile Exchange (Nymex) over the 30 calendar days to the base oil forward swap assessment day.

Prices are published in US dollars/tonne and in US dollars/gallon. Forward prices are published for three consecutive months and two quarters forward.

The conversion factor for SN 500 is 298 gallons to a metric tonne. The last day of publication of the first month of the forward price table will be the expiry date of the front-month heating oil futures contract published by Nymex.

The forward months will roll the day after expiry of the front-month Nymex heating oil futures contract. The last day of publication of the first calendar quarter of the forward strips will be the expiry date of the first Nymex heating oil month in a calendar quarter (January, April, July and October). Specifications are identical to those of the SN 500 fob US export spot price assessment.

Americas posted prices
The grades included in each refiner’s posted prices are determined independently by each refiner.

See the Argus Americas Base Oils methodology.

Annex I: Posted prices - refiners by grade

Group I base oils
ExxonMobil, HollyFrontier, Paulsboro Refining, Calumet and Pemex

Group II base oils
Excel Paralubes, Chevron, Motiva ExxonMobil, Calumet, Avista Oil and Petro-Canada

Group II+ base oils
ExxonMobil, SK Lubricants, Phillips 66, Safety-Kleen and Petro-Canada

Group III base oils
SK Lubricants, Phillips 66, Avista Oil, Petro-Canada and Motiva

Conversion factors - Americas spot prices
See the Argus Americas Base Oils methodology.

Arbitrage opportunities
The implied profit or loss, before freight and other costs, calculated as the difference between Argus price assessments. Each pair below is calculated as the second listed Argus price assessment less the first.

Group I
- SN 150 fob European export-SN 150 ex-tank Singapore
- SN 500 fob European export-SN 500 ex-tank Singapore
- SN 150 fob Baltic Sea-SN 150 ex-tank Singapore
- SN 500 fob Baltic Sea-SN 500 ex-tank Singapore
- SN 150 fob European export-SN 150 (LVI) cfr UAE
- SN 500 fob European export-SN 500 (LVI) cfr UAE
- SN 150 fob Asia-SN 150 fob domestic US
• SN 500 fob Asia-SN 500 fob domestic US
