LAST UPDATED: APRIL 2019
The most up-to-date Argus Mideast Gulf and Indian Ocean Products Methodology is available on www.argusmedia.com
Methodology overview

Methodology rationale
Argus strives to construct methodologies that reflect the way the market trades. Argus aims to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, the specific currencies, volume units, locations and other particulars of an assessment are determined by industry conventions.

In the Mideast Gulf and Indian Ocean refined products markets, Argus publishes physical market prices in the open market as laid out in the specifications and methodology guide. Argus uses the trading period deemed by Argus to be most appropriate, in consultation with industry, to capture market liquidity.

In order to be included in the assessment process, deals must meet the minimum volume, delivery, timing and specification requirements in our methodology. In illiquid markets, and in other cases where deemed appropriate, Argus assesses the range within which product could have traded by applying a strict process outlined later in this methodology.

Survey process
Argus price assessments are informed by information received from a wide cross-section of market participants, including producers, consumers and intermediaries. Argus reporters engage with the industry by proactively polling participants for market data. Argus will contact and accept market data from all credible market sources including front and back office of market participants and brokers. Argus will also receive market data from electronic trading platforms and directly from the back offices of market participants. Argus will accept market data by telephone, instant messenger, email or other means.

Argus encourages all sources of market data to submit all market data to which they are a party that falls within the Argus stated hierarchy would produce non-representative prices, requiring Argus to adapt in order to publish representative prices.

Verification of transaction data
Reporters carefully analyse all data submitted to the price assessment process. These data include transactions, bids, offers, volumes, counterparties, specifications and any other information that contributes materially to the determination of price. This high level of care described applies regardless of the methodology employed. Specific to transactions, bids, and offers, reporters seek to verify the price, the volume, the specifications, location basis, and counterparty. In some transactional average methodologies, reporters also examine the full array of transactions to match counterparties and arrive at a list of unique transactions. In some transactional average methodologies, full details of the transactions verified are published electronically and are accessible by subscribers. The deals are also published in the daily report.

Several tests are applied by reporters in all markets to transactional data to determine if it should be subjected to further scrutiny. If a transaction has been identified as failing such a test, it will receive further scrutiny. For assessments used to settle derivatives and for many other assessments, Argus has established internal procedures that involve escalation of inquiry within the source’s company and escalating review within Argus management. Should this process determine that a transaction should be excluded from the price assessment process, the supervising editor will initiate approval and, if necessary, documentation procedures.

Primary tests applied by reporters
- Transactions not transacted at arms length, including deals between related parties or affiliates.
- Transaction prices that deviate significantly from the mean of all transactions submitted for that day.
- Transaction prices that fall outside of the generally observed lows and highs that operated throughout the trading day.
- Transactions that are suspected to be a leg of another transaction or in some way contingent on an unknown transaction.
- Single deal volumes that significantly exceed the typical transaction volume for that market.
- Transaction details that are identified by other market participants as being for any reason potentially anomalous and perceived by Argus to be as such.
• Transaction details that are reported by one counterparty differently than the other counterparty.
• Any transaction details that appear to the reporter to be illogical or to stray from the norms of trading behaviour. This could include but is not limited to divergent specifications, unusual delivery location and counterparties not typically seen.
• Transactions that involve the same counterparties, the same price and delivery dates are checked to see that they are separate deals and not one deal duplicated in Argus records.

Secondary tests applied by editors for transactions identified for further scrutiny

Transaction tests
• The impact of linkage of the deal to possible other transactions such as contingent legs, exchanges, options, swaps, or other derivative instruments. This will include a review of transactions in markets that the reporter may not be covering.
• The nature of disagreement between counterparties on transactional details.
• The possibility that a deal is directly linked to an offsetting transaction that is not publicly known, for example a “wash trade” which has the purpose of influencing the published price.
• The impact of non-market factors on price or volume, including distressed delivery, credit issues, scheduling issues, demurrage, or containment.

Source tests
• The credibility of the explanation provided for the outlying nature of the transaction.
• The track record of the source. Sources will be deemed more credible if they
• Regularly provide transaction data with few errors.
• Provide data by Argus’ established deadline.
• Quickly respond to queries from Argus reporters.
• Have staff designated to respond to such queries.
• How close the information receipt is to the deadline for information, and the impact of that proximity on the validation process.

Assessment guidelines
When insufficient, inadequate, or no transaction information exists, or when Argus concludes that a transaction based methodology will not produce representative prices, Argus reporters will make an assessment of market value by applying intelligent judgment based on a broad array of factual market information. Reporters must use a high degree of care in gathering and validating all market data used in determining price assessments, a degree of care equal to that applying to gathering and validating transactions. The information used to form an assessment could include deals done, bids, offers, tenders, spread trades, exchange trades, fundamental supply and demand information and other inputs.

The assessment process employing judgment is rigorous, replicable, and uses widely accepted valuation metrics. These valuation metrics mirror the process used by physical commodity traders to internally assess value prior to entering the market with a bid or offer. Applying these valuation metrics along with sound judgment significantly narrows the band within which a commodity can be assessed, and greatly increases the accuracy and consistency of the price series. The application of judgment is conducted jointly with the supervising editor, in order to be sure that guidelines below are being followed. Valuation metrics include the following:

Relative value transactions
Frequently transactions occur which instead of being an outright purchase or sale of a single commodity, are instead exchanges of commodities. Such transactions allow reportors to value less liquid markets against more liquid ones and establish a strong basis for the exercise of judgment.

• Exchange one commodity for a different commodity in the same market at a negotiated value.
• Exchange delivery dates for the same commodity at a negotiated value.
• Exchange a commodity in one location for the same commodity at another location at a negotiated value.

Bids and offers
If a sufficient number of bids and offers populate the market, then in most cases the highest bid and the lowest offer can be assumed to define the boundaries between which a deal could be transacted.

Comparative metrics
• The relative values between compared commodities are readily discussed in the market and can be discovered through dialogue with market participants. These discussions are the precursor to negotiation and conclusion of transactions.
• Comparison to the same commodity in another market centre.
• Comparison to a more actively traded but slightly different specification commodity in the same market centre.
• Comparison to the same commodity traded for a different delivery timing.
• Comparison to the commodity’s primary feedstock or primary derived product(s).
• Comparison to trade in the same commodity but in a different modality (as in barge versus oceangoing vessel) or in a different total volume (as in full cargo load versus partial cargo load).

Volume minimums and transaction data thresholds
Argus typically does not establish thresholds strictly on the basis of a count of transactions, as this could lead to unreliable and non-representative assessments and because of the varying transport infrastructure found in all commodity markets. Instead, minimum volumes are typically established which may apply to each transaction accepted, to the aggregate of transactions, to transactions which set a low or high assessment or to other volumetrically relevant parameters.

For price assessments used to settle derivatives, Argus will seek to establish minimum transaction data thresholds and when no such threshold can be established Argus will explain the reasons. These
thresholds will often reflect the minimum volumes necessary to produce a transaction-based methodology, but may also establish minimum deal parameters for use by a methodology that is based primarily on judgment.

Should no transaction threshold exist, or should submitted data fall below this methodology’s stated transaction data threshold for any reason, Argus will follow the procedures outlined elsewhere in this document regarding the exercise of judgment in the price assessment process.

Transparency
Argus values transparency in energy markets. As a result, where available, we publish lists of deals in our reports that include price, basis, counterparty and volume information. The deal tables allow subscribers to cross check and verify the deals against the prices. Argus feels transparency and openness is vital to developing confidence in the price assessment process.

Swaps and forwards markets
Argus publishes forward assessments for numerous markets. These include forward market contracts that can allow physical delivery and swaps contracts that swap a fixed price for the average of a floating published price. Argus looks at forward swaps to inform physical assessments but places primary emphasis on the physical markets.

Publications and price data
Argus Mideast Gulf and Indian Ocean refined products prices are published in the Argus Mideast Gulf and Indian Ocean Products report. Subsets of these prices appear in other Argus market reports and newsletters in various forms. The price data are available independent of the text-based report in electronic files that can feed into various databases. These price data are also supplied through various third-party data integrators. The Argus website also provides access to prices, reports and news with various web-based tools. All Argus prices are kept in a historical database and available for purchase. Contact your local Argus office for information. A publication schedule is available at www.argusmedia.com

Corrections to assessments
Argus will on occasion publish corrections to price assessments after the publication date. We will correct errors that arise from clerical mistakes, calculation errors, or a misapplication of our stated methodology. Argus will not retroactively assess markets based on new information learned after the assessments are published. We make our best effort to assess markets based on the information we gather during the trading day assessed.

Ethics and compliance
Argus operates according to the best practices in the publishing field, and maintains thorough compliance procedures throughout the firm. We want to be seen as a preferred provider by our subscribers, who are held to equally high standards, while at the same time maintaining our editorial integrity and independence. Argus has a strict ethics policy that applies to all staff. The policy can be found on our website at www.argusmedia.com. Included in this policy are restrictions against staff trading in any energy commodity or energy related stocks, and guidelines for accepting gifts. Argus also has strict policies regarding central archiving of email and instant messenger communication, maintenance and archiving of notes, and archiving of spreadsheets and deal lists used in the price assessment process. Argus publishes prices that report and reflect prevailing levels for open-market arms length transactions (please see the Argus Global Compliance Policy for a detailed definition of arms length).

Consistency in the assessment process
Argus recognises the need to have judgment consistently applied by reporters covering separate markets, and by reporters replacing existing reporters in the assessment process. In order to ensure this consistency, Argus has developed a programme of training and oversight of reporters. This programme includes:

- A global price reporting manual describing among other things the guidelines for the exercise of judgment
- Cross-training of staff between markets to ensure proper holiday and sick leave backup. Editors that float between markets to monitor staff application of best practices
- Experienced editors overseeing reporting teams are involved in daily mentoring and assisting in the application of judgment for illiquid markets
- Editors are required to sign-off on all price assessments each day, thus ensuring the consistent application of judgment.

Review of methodology
The overriding objective of any methodology is to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, Argus editors and reporters are regularly examining our methodologies and are in regular dialogue with the industry in order to ensure that the methodologies are representative of the market being assessed. This process is integral with reporting on a given market. In addition to this ongoing review of methodology, Argus conducts reviews of all of its methodologies and methodology documents on at least an annual basis.

Argus market report editors and management will periodically and as merited initiate reviews of market coverage based on a qualitative analysis that includes measurements of liquidity, visibility of market data, consistency of market data, quality of market data and industry usage of the assessments. Report editors will review:

- Appropriateness of the methodology of existing assessments
- Termination of existing assessments
- Initiation of new assessments.

The report editor will initiate an informal process to examine viability. This process includes:

- Informal discussions with market participants
- Informal discussions with other stakeholders
- Internal review of market data
Should changes, terminations, or initiations be merited, the report editor will submit an internal proposal to management for review and approval. Should changes or terminations of existing assessments be approved, then formal procedures for external consultation are begun.

Changes to methodology

Formal proposals to change methodologies typically emerge out of the ongoing process of internal and external review of the methodologies. Formal procedures for external consultation regarding material changes to existing methodologies will be initiated with an announcement of the proposed change published in the relevant Argus report. This announcement will include:

- Details on the proposed change and the rationale
- Method for submitting comments with a deadline for submissions
- For prices used in derivatives, notice that all formal comments will be published after the given consultation period unless submitter requests confidentiality.

Argus will provide sufficient opportunity for stakeholders to analyse and comment on changes, but will not allow the time needed to follow these procedures to create a situation wherein unrepresentative or false prices are published, markets are disrupted, or market participants are put at unnecessary risk. Argus will engage with industry throughout this process in order to gain acceptance of proposed changes to methodology. Argus cannot however guarantee universal acceptance and will act for the good order of the market and ensure the continued integrity of its price assessments as an overriding objective.

Following the consultation period, Argus management will commence an internal review and decide on the methodology change. This will be followed by an announcement of the decision, which will be published in the relevant Argus report and include a date for implementation. For prices used in derivatives, publication of stakeholders’ formal comments that are not subject to confidentiality and Argus’ response to those comments will also take place.

Introduction

Argus Mideast Gulf and Indian Ocean Products is a daily market report that publishes prices and market commentary on the international bulk spot market for petroleum products in the Mideast Gulf and Indian Ocean. Argus Mideast Gulf and Indian Ocean Products contains price assessments for different types of spot contracts at specified locations. The report provides prices that are used in third-party contracts, risk management contracts (such as swaps), internal price transfers, internal benchmarking, market-to-market pricing and market analysis. The assessed prices are based on prices from the open spot market whenever possible.

Methodological principles

Argus assessments are based upon the structure of the market as established by market participants. So if market participants trade and price products in relation to certain benchmarks, then Argus will publish prices in relation to these benchmarks.

The Argus method includes trades from various platforms — Argus Open Markets, close of market windows, e-commerce portals, third-party transactions and over-the-counter swaps — to reflect a daily consensus on the price of the day. The Argus methodology relies on a survey and analysis of market inputs. It often varies from “market on close” methodologies, which only recognise select transactions, bids or offers at a specific closing time of each day.

The Argus method considers inputs received throughout the entire day up until its daily timestamp. Argus price assessments in Argus Mideast Gulf and Indian Ocean Products reflect standardised specifications under the general terms and conditions employed for standard contracts in common use.

Market survey

Argus market specialists conduct comprehensive daily surveys of key industry participants to collect trade information and gauge prevailing market sentiment. Through interrogative enquiries and analysis, Argus market reporters consider a broad range of trade data, including physical transactions, fixed-price deals, formula-related deals, premiums, discounts, reported but unconfirmed trades, tender results, netbacks, bids, offers, swaps, spreads and supply-demand fundamentals before making their assessment of the open market price for each product.

Argus reporters use the telephone and various electronic mail and messaging services to acquire and cross-check their information. Argus does not restrict itself to one subsection of the market such as a single trading platform or single informational channel for its market information. Argus will contact and accept market data from all credible market sources including front and back office of market participants and brokers.

The market surveys are balanced in their approach and are conducted by well trained specialists who are part of a dedicated team responsible for the Argus Mideast Gulf and Indian Ocean Products report. The market surveys will involve up to 30 market participants in each market segment contacted by telephone or electronically. The information will be verified and analysed. The approach is methodical and standardised and the assessments will be tested against the views of other market participants. Information from the survey is verified as best possible and archived in databases.

Price assessments

Transactions and buy-sell ranges outside of the Argus loading/delivery periods and for specifications not directly included in the methodology are considered when assessing prices if market participants believe
they have affected market values for the products under the standardised terms reported in the Argus Mideast Gulf and Indian Ocean Products report. Deals, bids and offers must be considered repeatable and representative to be reflected in daily assessments. Information collected during the course of the day is taken into account but if the market shows high intra-day volatility, Argus will weight the assessments towards trading activity at the end of the working day up to the cut-off time in the specifications listed below.

Some assessments are published as a service to the industry that are not supported by an open traded market. These price assessments will be constructed by comparing price values from the liquid traded open markets adjusted for freight and any other appropriate costs. All assessments and formulas refer to the price of the product on the day of the published report and are expressed in US dollars unless otherwise stated. The prices are for contracts under whatever general terms and conditions are accepted as standard and prevailing in that particular market. Price changes refer to the last published report.

Argus provides an overview of the day’s product market activity, highlighting changes in key product prices and the price differences among the various regional pricing centres. The report allows readers to quickly understand the key market drivers. Argus provides an at-a-glance summary of the majority of the prices contained within the report, illustrating each product’s performance in relation to other oil products. See the relevant sections of this methodology for full details of each price assessment.

**Gasoline**

**Differential to fob Mideast Gulf naphtha**
Motor gasoline 95R (95 Ron, Research Octane Number) unleaded
The assessed market premium (or discount) to the Mean of Platts Arabian Gulf (Mopag) naphtha price
Unit: US dollars/tonne
Basis: fob Mideast Gulf
Timing: cargoes loading 15-30 days forward from the date of publication
The premiums/discounts are based on reported transactions, bids, offers and relevant market discussions for trade 15-30 days forward from the date of publication
Specifications:
- 95 Ron unleaded
- Lead: maximum 0.01g/l
- RVP 9-10psi
- Specific gravity: typically 0.740
- Sulphur: maximum 500ppm
- MTBE: maximum 10%
- Total oxygenates: maximum 14%
- Benzene: maximum 5%
For the up-to-date methodology and specifications see the Argus Asia-Pacific Products methodology.

**Gasoil**

**Gasoil 0.05% differential to Ice gasoil**
Gasoil of 500ppm sulphur content
The assessed market premium (or discount) to the Ice gasoil price
Unit: US dollars/barrel
Basis: fob Mideast Gulf
Timing: cargoes loading 15-30 days forward from the date of publication
The differential is the Mean of Platts Arabian Gulf (Mopag) gasoil plus differential minus Ice gasoil
Specifications:
- Sulphur: 0.05% maximum sulphur
- Pour point: 6-9°Cpp
- Distillation point: maximum 370°C at which 95% recovered
- Cetane number: minimum 48
- Colour: maximum 2
- Cargo size: Typically 30,000-60,000t

**Gasoil 0.001% differential to Ice gasoil**
Gasoil of 10ppm sulphur content.
The assessed market premium (or discount) to the Ice gasoil price
Unit: US dollars/barrel
Basis: fob Mideast Gulf
Timing: cargoes loading 15-30 days forward from the date of publication.
The differential is the Mean of Platts Arabian Gulf (Mopag) gasoil plus differential minus Ice gasoil
Specifications:
- Sulphur: 0.001% maximum sulphur
- Pour point: 6-9°Cpp
- Distillation point: maximum 370°C at which 95% recovered
- Cetane number: minimum 48
- Colour: maximum 2
- Cargo size: Typically 30,000-60,000t

**Gasoil 0.005% (50ppm)**
Gasoil of 0.005% (50 parts per million) sulphur
The assessment of 0.005% sulphur gasoil fob Mideast Gulf is calculated as the 0.001% sulphur gasoil fob Mideast Gulf outright assessment plus the assessed market premium (or discount) to Mean of Platts Arab Gulf (Mopag) 0.001% sulphur gasoil
Unit: US dollars/barrel
Basis: fob Mideast Gulf
The premiums/discounts are based on reported transactions, bids, offers and relevant market discussions for trade 15-30 days forward from the date of publication
Specifications:
- Sulphur: 0.005% maximum sulphur
- Pour point: 6-9°Cpp
- Distillation point: maximum 360°C at which 95% recovered
- Cetane number: minimum 48 (ATSM D4737)
- Colour: maximum 2
- Cargo size: Typically 30,000-60,000t
Gasoil 0.5% (5,000ppm)
Gasoil of 0.5% (5,000 parts per million) sulphur.
The assessment of 0.5% sulphur gasoil fob Mideast Gulf is calculated from the 0.001% sulphur gasoil fob Mideast Gulf assessment plus the assessed market premium (or discount) to the Mean of Platts Arab Gulf (Mopag) 0.001% sulphur gasoil
Unit: US dollars/barrel
Some third-party carriers of Argus price information provide the Argus 0.5% gasoil price in alternative units. The conversion factor used by these third parties is 7.46 bl to a metric tonne.
Basis: fob Mideast Gulf
The premiums/discounts are based on reported transactions, bids, offers and relevant market discussions for trade 15-30 days forward from the date of publication
Specifications:
Sulphur: 0.5% maximum sulphur
Pour point: 6-9°Cpp
Distillation point: maximum 370°C at which 90% recovered
Cetane number: minimum 48
Colour: maximum 2
Cargo size: Typically 30,000-60,000t

Fuel oil
Fuel oil 380cst fob Fujairah barge
Residual fuel oil
Unit: US dollars/tonne
Timing: loading 7-15 days forward from date of publication. The buyer shall nominate a three-day laycan within the agreed delivery period no later than five days before the start of that laycan
Size: 5,000-7,000t
Basis: fob Fujairah
Prices are assessed the prevailing price in the market at 12:30pm Dubai time, based on trade and the highest bid and lowest offer in the market at the time
Specification: fuel oil meeting ISO 8217 specifications for RMG 380
Payment: within 30 days after bill of lading

Fuel oil 0.5%S fob Fujairah barge
Low-sulphur residual fuel oil
Unit: US dollars/tonne
Timing: loading 5-15 days forward
Size: 4,000-7,000t
Basis: fob Fujairah
Specifications: Fuel oil of maximum 0.5pc sulphur, maximum viscosity of 380cst

Publication schedule
The fuel oil 380cst fob Fujairah barge and fuel oil 0.5%S fob Fujairah barge prices are assessed and published according to a Dubai publication schedule available at www.argusmedia.com. The price may be assessed on days the full Argus Mideast Gulf and Indian Ocean Products report is not published. In those instances, the price will be distributed to subscribers electronically and published in the next edition of Argus Mideast Gulf and Indian Ocean Products. Note that the timing of Dubai holidays can change at short notice. Subscribers will be notified of any change to the publication schedule.

Jet
Jet differential to Ice gasoil
The assessed market premium (or discount) to the Ice gasoil price
Unit: US dollars/barrel
Basis: fob Mideast Gulf
Timing: cargoes loading 15-30 days forward from the date of publication
The differential is the Mean of Platts Arabian Gulf (Mopag) jet price plus differential minus Ice gasoil
Specifications:
The latest UK Defence Standard specifications

Naphtha
West Coast India differential to fob Mideast Gulf naphtha
The assessed market premium (or discount) to the Mean of Platts Arabian Gulf (Mopag) naphtha price
Unit: US dollars/tonne
Basis: fob west coast India
Timing: cargoes loading 15-30 days forward from the date of publication
The premiums/discounts are based on reported transactions, bids, offers and relevant market discussions for trade 15-30 days forward from the date of publication
Specifications:
Paraffins: 65% minimum
Specific gravity: 0.65/0.74 at 60°F
Olefins: maximum 1%
Colour (Saybolt): minimum +20,
RVP (PSI): maximum 13
Lead (PPB): maximum 150
Sulphur: maximum 650ppm
IBP: minimum 25°C
FBP: max 204°C
Cargo size: 35,000t.

Bunkers
Fujairah 180cst
Bunkers 180cst delivered on board Fujairah. See the Argus Marine Fuels methodology.

Fujairah 380cst
Bunkers 380cst delivered on board Fujairah. See the Argus Marine Fuels methodology.

Fujairah 0.5%S
Bunkers 0.5%S delivered on board Fujairah See the Argus Marine Fuels methodology.
