The most up-to-date Argus Propylene and Derivatives Methodology and Specification Guide is available on www.argusmedia.com

Methodology overview

Methodology rationale

Argus strives to construct methodologies that reflect the way the market trades. Argus aims to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, the specific currencies, volume units, locations and other particulars of an assessment are determined by industry conventions.

In the propylene markets, Argus publishes physical market prices in the open market as laid out in the specifications and methodology guide. Argus uses the trading period deemed by Argus to be most appropriate, in consultation with industry, to capture market liquidity.

In order to be included in the assessment process, deals must meet the minimum volume, delivery, timing and specification requirements in our methodology. In illiquid markets, and in other cases where deemed appropriate, Argus assesses the range within which product could have traded by applying a strict process outlined later in this methodology.

Survey process

Argus price assessments are informed by information received from a wide cross section of market participants, including producers, consumers and intermediaries. Argus reporters engage with the industry by proactively polling participants for market data. Argus will contact and accept market data from all credible market sources including front and back office of market participants and brokers. Argus will also receive market data from electronic trading platforms and directly from the back offices of market participants. Argus will accept market data by telephone, instant messenger, email or other means.

Argus encourages all sources of market data to submit all market data to which they are a party that falls within the Argus stated methodological criteria for the relevant assessment. Argus encourages all sources of market data to submit transaction data from back office functions.

Throughout all markets, Argus is constantly seeking to increase the number of companies willing to provide market data. Reporters are mentored and held accountable for expanding their pool of contacts. The number of entities providing market data can vary significantly from day to day based on market conditions.

For certain price assessments identified by local management, if more than 50pc of the market data involved in arriving at a price assessment is sourced from a single party the supervising editor will engage in an analysis of the market data with the primary reporter to ensure that the quality and integrity of the assessment has not been affected.

Market data usage

In each market, Argus uses the methodological approach deemed to be the most reliable and representative for that market. Argus will utilise various types of market data in its methodologies, to include:

- Transactions
- Bids and offers
- Other market information, to include spread values between grades, locations, timings, and many other data.

In many markets, the relevant methodology will assign a relatively higher importance to transactions over bids and offers, and a relatively higher importance to bids and offers over other market information. Certain markets however will exist for which such a hierarchy would produce unreliable and non-representative price assessments, and so the methodology must assign a different relative importance in order to ensure the quality and integrity of the price assessment. And even in markets for which the hierarchy normally applies, certain market situations will at times emerge for which the strict hierarchy would produce non-representative prices, requiring Argus to adapt in order to publish representative prices.

Verification of transaction data

Reporters carefully analyse all data submitted to the price assessment process. These data include transactions, bids, offers, volumes, counterparties, specifications and any other information that contributes materially to the determination of price. This high level of care described applies regardless of the methodology employed. Specific to transactions, bids, and offers, reporters seek to verify the price, the volume, the specifications, location basis, and counterparty. In some transactional average methodologies, reporters also examine the full array of transactions to match counterparties and arrive at a list of unique transactions. In some transactional average methodologies, full details of the transactions verified are published electronically and are accessible by subscribers.

Several tests are applied by reporters in all markets to transactional data to determine if it should be subjected to further scrutiny. If a transaction has been identified as failing such a test, it will receive further scrutiny. For assessments used to settle derivatives and for many other assessments, Argus has established internal procedures that involve escalation of inquiry within the source's company and escalating review within Argus management. Should this process determine that a transaction should be excluded from the price assessment process, the supervising editor will initiate approval and, if necessary, documentation procedures.

Primary tests applied by reporters

- Transactions not transacted at arm's length, including deals between related parties or affiliates.
- Transaction prices that deviate significantly from the mean of all transactions submitted for that day.
- Transaction prices that fall outside of the generally observed lows and highs that operated throughout the trading day.
- Transactions that are suspected to be a leg of another transaction or in some way contingent on an unknown transaction.
- Single deal volumes that significantly exceed the typical transaction volume for that market.
- Transaction details that are identified by other market participants as being for any reason potentially anomalous and perceived by Argus to be as such.

- Transaction details that are reported by one counterparty differently than the other counterparty.
- Any transaction details that appear to the reporter to be illogical or to stray from the norms of trading behaviour. This could include but is not limited to divergent specifications, unusual delivery location and counterparties not typically seen.
- Transactions that involve the same counterparties, the same price and delivery dates are checked to see that they are separate deals and not one deal duplicated in Argus records.

Secondary tests applied by editors for transactions identified for further scrutiny

Transaction tests

- The impact of linkage of the deal to possible other transactions such as contingent legs, exchanges, options, swaps, or other derivative instruments. This will include a review of transactions in markets that the reporter may not be covering.
- The nature of disagreement between counterparties on transactional details.
- The possibility that a deal is directly linked to an offsetting transaction that is not publicly known, for example a “wash trade” which has the purpose of influencing the published price.
- The impact of non-market factors on price or volume, including distressed delivery, credit issues, scheduling issues, demurrage, or containment.

Source tests

- The credibility of the explanation provided for the outlying nature of the transaction.
- The track record of the source. Sources will be deemed more credible if they
 - Regularly provide transaction data with few errors.
 - Provide data by Argus’ established deadline.
 - Quickly respond to queries from Argus reporters.
 - Have staff designated to respond to such queries.
- How close the information receipt is to the deadline for information, and the impact of that proximity on the validation process.

Assessment guidelines

When insufficient, inadequate, or no transaction information exists, or when Argus concludes that a transaction based methodology will not produce representative prices, Argus reporters will make an assessment of market value by applying intelligent judgment based on a broad array of factual market information. Reporters must use a high degree of care in gathering and validating all market data used in determining price assessments, a degree of care equal to that applying to gathering and validating transactions. The information used to form an assessment could include deals done, bids, offers, tenders, spread trades, exchange trades, fundamental supply and demand information and other inputs.

The assessment process employing judgment is rigorous, replicable, and uses widely accepted valuation metrics. These valuation metrics mirror the process used by physical commodity traders

to internally assess value prior to entering the market with a bid or offer. Applying these valuation metrics along with sound judgment significantly narrows the band within which a commodity can be assessed, and greatly increases the accuracy and consistency of the price series. The application of judgment is conducted jointly with the supervising editor, in order to be sure that guidelines below are being followed. Valuation metrics include the following:

Relative value transactions

Frequently transactions occur which instead of being an outright purchase or sale of a single commodity, are instead exchanges of commodities. Such transactions allow reporters to value less liquid markets against more liquid ones and establish a strong basis for the exercise of judgment.

- Exchange one commodity for a different commodity in the same market at a negotiated value.
- Exchange delivery dates for the same commodity at a negotiated value.
- Exchange a commodity in one location for the same commodity at another location at a negotiated value.

Bids and offers

If a sufficient number of bids and offers populate the market, then in most cases the highest bid and the lowest offer can be assumed to define the boundaries between which a deal could be transacted.

Comparative metrics

The relative values between compared commodities are readily discussed in the market and can be discovered through dialogue with market participants. These discussions are the precursor to negotiation and conclusion of transactions.

- Comparison to the same commodity in another market centre.
- Comparison to a more actively traded but slightly different specification commodity in the same market centre.
- Comparison to the same commodity traded for a different delivery timing.
- Comparison to the commodity’s primary feedstock or primary derived product(s).
- Comparison to trade in the same commodity but in a different modality (as in barge versus oceangoing vessel) or in a different total volume (as in full cargo load versus partial cargo load).

Volume minimums and transaction data thresholds

Argus typically does not establish thresholds strictly on the basis of a count of transactions, as this could lead to unreliable and non-representative assessments and because of the varying transportation infrastructure found in all commodity markets. Instead, minimum volumes are typically established which may apply to each transaction accepted, to the aggregate of transactions, to transactions which set a low or high assessment or to other volumetrically relevant parameters.

For price assessments used to settle derivatives, Argus will seek to establish minimum transaction data thresholds and when no such

threshold can be established Argus will explain the reasons. These thresholds will often reflect the minimum volumes necessary to produce a transaction-based methodology, but may also establish minimum deal parameters for use by a methodology that is based primarily on judgment.

Should no transaction threshold exist, or should submitted data fall below this methodology's stated transaction data threshold for any reason, Argus will follow the procedures outlined elsewhere in this document regarding the exercise of judgment in the price assessment process.

Transparency

Argus values transparency in energy markets. As a result, where available, we publish lists of deals in our reports that include price, basis, counterparty and volume information. The deal tables allow subscribers to cross check and verify the deals against the prices. Argus feels transparency and openness is vital to developing confidence in the price assessment process.

Swaps and forwards markets

Argus publishes forward assessments for numerous markets. These include forward market contracts that can allow physical delivery and swaps contracts that swap a fixed price for the average of a floating published price. Argus looks at forward swaps to inform physical assessments but places primary emphasis on the physical markets.

Publications and price data

Argus propylene prices are published in the Argus Propylene and Derivatives report. Subsets of these prices appear in other Argus market reports and newsletters in various forms. The price data are available independent of the text-based report in electronic files that can feed into various databases. These price data are also supplied through various third-party data integrators. The Argus website also provides access to prices, reports and news with various web-based tools. All Argus prices are kept in a historical database and available for purchase. Contact your local Argus office for information.

A publication schedule is available at www.argusmedia.com

Corrections to assessments

Argus will on occasion publish corrections to price assessments after the publication date. We will correct errors that arise from clerical mistakes, calculation errors, or a misapplication of our stated methodology. Argus will not retroactively assess markets based on new information learned after the assessments are published. We make our best effort to assess markets based on the information we gather during the trading period assessed.

If transaction information is submitted in error, and the company submitting informs Argus of the error, Argus will review both the material effect that the correction will have on the price data and the amount of time that has elapsed from the date of the published price data before deciding whether to issue a correction. After 30 days, Argus is unlikely to make a correction based on information submitted in error, and data submitters are not expected to file corrections to submitted data.

Ethics and compliance

Argus operates according to the best practices in the publishing field, and maintains thorough compliance procedures throughout the firm. We want to be seen as a preferred provider by our subscribers, who are held to equally high standards, while at the same time maintaining our editorial integrity and independence. Argus has a strict ethics policy that applies to all staff. The policy can be found on our website at www.argusmedia.com. Included in this policy are restrictions against staff trading in any energy commodity or energy related stocks, and guidelines for accepting gifts. Argus also has strict policies regarding central archiving of email and instant messenger communication, maintenance and archiving of notes, and archiving of spreadsheets and deal lists used in the price assessment process. Argus publishes prices that report and reflect prevailing levels for open-market arms length transactions (please see the [Argus Global Compliance Policy](#) for a detailed definition of arms length).

Consistency in the assessment process

Argus recognises the need to have judgment consistently applied by reporters covering separate markets, and by reporters replacing existing reporters in the assessment process. In order to ensure this consistency, Argus has developed a programme of training and oversight of reporters. This programme includes:

- A global price reporting manual describing among other things the guidelines for the exercise of judgment
- Cross-training of staff between markets to ensure proper holiday and sick leave backup. Editors that float between markets to monitor staff application of best practices
- Experienced editors overseeing reporting teams are involved in daily mentoring and assisting in the application of judgment for illiquid markets
- Editors are required to sign-off on all price assessments each day, thus ensuring the consistent application of judgment.

Review of methodology

The overriding objective of any methodology is to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, Argus editors and reporters are regularly examining our methodologies and are in regular dialogue with the industry in order to ensure that the methodologies are representative of the market being assessed. This process is integral with reporting on a given market. In addition to this ongoing review of methodology, Argus conducts reviews of all of its methodologies and methodology documents on at least an annual basis.

Argus market report editors and management will periodically and as merited initiate reviews of market coverage based on a qualitative analysis that includes measurements of liquidity, visibility of market data, consistency of market data, quality of market data and industry usage of the assessments. Report editors will review:

- Appropriateness of the methodology of existing assessments
- Termination of existing assessments
- Initiation of new assessments.

The report editor will initiate an informal process to examine viability. This process includes:

- Informal discussions with market participants
- Informal discussions with other stakeholders
- Internal review of market data

Should changes, terminations, or initiations be merited, the report editor will submit an internal proposal to management for review and approval. Should changes or terminations of existing assessments be approved, then formal procedures for external consultation are begun.

Changes to methodology

Formal proposals to change methodologies typically emerge out of the ongoing process of internal and external review of the methodologies. Formal procedures for external consultation regarding material changes to existing methodologies will be initiated with an announcement of the proposed change published in the relevant Argus report. This announcement will include:

- Details on the proposed change and the rationale
- Method for submitting comments with a deadline for submissions
- For prices used in derivatives, notice that all formal comments will be published after the given consultation period unless submitter requests confidentiality.

Argus will provide sufficient opportunity for stakeholders to analyse and comment on changes, but will not allow the time needed to follow these procedures to create a situation wherein unrepresentative or false prices are published, markets are disrupted, or market participants are put at unnecessary risk. Argus will engage with industry throughout this process in order to gain acceptance of proposed changes to methodology. Argus cannot however guarantee universal acceptance and will act for the good order of the market and ensure the continued integrity of its price assessments as an overriding objective.

Following the consultation period, Argus management will commence an internal review and decide on the methodology change. This will be followed by an announcement of the decision, which will be published in the relevant Argus report and include a date for implementation. For prices used in derivatives, publication of stakeholders' formal comments that are not subject to confidentiality and Argus' response to those comments will also take place.

Introduction

Argus Propylene and Derivatives is a biweekly report that publishes prices and market commentary on international propylene and its major derivatives. The report is published on Wednesday evening in the US. A biweekly Propylene price update is published on the weeks that the report is not published. The Argus website also provides access to prices, reports and news with various web-based tools. All Argus prices are kept in a historical database and are available for purchase.

Argus Propylene and Derivatives contains price assessments for contract and spot prices in North America, Europe and Asia-Pacific. It also contains pricing for polypropylene and related feedstocks such as ethane, propane, butane and naphtha. The methodologies for those products are published on the Argus website.

Propylene market prices

Argus weekly propylene price assessments represent the market over the course of the Wednesday-Tuesday period prior to publication.

Various methodological approaches are employed in reporting propylene markets to produce the most representative price assessments.

In illiquid markets, Argus assesses the range within which propylene could have traded, based on bids and offers through the week, movements of similar or related grades, and extensive polling of market participants. Formula-priced deals and market fundamentals also inform assessments but a primary emphasis is placed on the physical markets.

To be included in the price formation process, deals must meet the strict delivery, timing, and specification requirements in the methodology, and must be executed at arms length between a willing buyer and seller.

Argus verifies market prices with major producers and consumers of the contract price each month.

Survey method verification

Price assessments in Argus Propylene and Derivatives rely on a wide variety of sources for information, including producers, markets, importers, traders and brokers.

Argus does not restrict itself to one subsection of the market, such as a single trading platform or single informational channel for the market information collected. The market surveys are intended to be balanced in approach and are conducted by experienced industry specialists.

Currency, unit of measure and timing

All assessments and formulas refer to the price of propylene for the week of the published report.

Prices are reported in base currency and units of measure unless stated otherwise, but are also converted to US dollar per metric tonne (\$/t) for regional comparisons.

European prices are assessed in euro. Spot prices are converted to US dollars using the exchange rate on the day of publication. Contract prices are converted using the exchange rate on the day of settlement.

Confidentiality

Argus asks for counterparties from contacts in order to confirm trades and to avoid double-counting in volume-weighted averages. But Argus does not publish counterparty names in the propylene market. Many companies have existing confidentiality agreements with counterparties and can only reveal trade information to Argus if confidentiality is maintained.

US markets

USGC contract

The contract price is agreed upon by the largest producers and consumers every month. The contract price is typically settled during the month of trading.

Polymer grade USGC pipeline spot

The low and high spot transactions for the Wednesday-Tuesday period prior to publication. Includes only prices at Mont Belvieu, Texas. In the event that no spot transactions are reported, Argus assesses the range in which trades could have been conducted, based on bid-ask information from the week.

Polymer grade USGC export spot

Calculated by adding an assessed differential to the Poly grade USGC pipeline spot assessment. The differential is the additional cost of delivering product free on board a vessel rather than by pipeline.

Refinery grade Mt Belvieu spot

The low and high spot transactions for the Wednesday-Tuesday period prior to publication. Includes only prices at Mont Belvieu, Texas. In the event that no spot transactions are reported, Argus assesses the range that trades could have been conducted in, based on bid-ask information from the week.

Month-to-date average refinery grade spot

The month-to-date average is the arithmetic average of all transactions for refinery grade propylene delivered in the current month. For example, a trade for October delivery that was transacted in September would be included in the average for October.

Roll date for spot prices

Prompt-month assessments roll off and the next month becomes prompt on the first business day of the month.

US specifications

Chemical grade propylene contract

Location: Mont Belvieu, Texas

Timing: month of delivery

Volume: low and high minimum: 1mn lbs

Specifications: at least 93pc propylene

Basis: contract

Roll date: first business day of the month

Spot Polymer grade propylene

Location: Mont Belvieu, Texas

Timing: month of delivery

Volume: low and high minimum: 1mn lbs

Specifications: at least 99.5pc propylene

Basis: pipeline

Roll date: first business day of the month

Polymer grade propylene contract

Location: Mont Belvieu, Texas

Timing: month of delivery

Volume: low and high minimum: 1mn lbs

Specifications: at least 99.5pc propylene;

Basis: pipeline

Roll date: first business day of the month

Refinery grade propylene

Location: Mont Belvieu, Texas

Timing: current calendar month

Volume: low and high minimum: 25,000 bl

Specifications: minimum of 65pc propylene

Basis: pipeline or railcar

Roll date: first business day of the month

Related assessments

Daily calculated USGC propylene alkylation snapshot

See the [Argus NGL Americas methodology](#).

C3 fuel USGC calculated value

The fuel value of propylene is calculated using a proprietary formula based on the chemical relationship of the product to propane.

Polypropylene

East of the Rockies contract prices are for the named month.

- PP homopolymer
- PP copolymer

See the [Argus Global Polypropylene methodology](#).

Acrylonitrile

The US acrylonitrile price is published every two weeks. The price is derived from two elements — a price based on an expected net-back from exports to northeast Asia, and conversations with market participants, which are used to validate the derived price.

Basis: fob US Gulf coast

Timing: 1-14 days from day of publication

Western Europe

Monthly contract price – PGP

Refers only to polymer grade propylene. In most cases the contract is agreed before the start of the month of the contract, however, on occasion, it has been settled after the first of the month.

The contract price is confirmed once Argus is satisfied that two independent sellers and two independent buyers have agreed on a single monthly contract price. Any buyer or seller of propylene with physical production or consumption in western Europe can take part in the negotiation of the contract price; traders do not participate in the contract price settlement.

The confirmation of the contract price involves extensive consultation between producers and their customers to ensure that there is a good level of consensus. On occasion, an initial settlement may not be confirmed when others in the industry are not in agreement. Because of this uncertainty, Argus publishes a new monthly contract price only when it is satisfied a consensus has been reached by the majority of parties involved.

Weekly spot prices – Propylene

Cif NWE polymer grade propylene spot

Location: northwest Europe

Volume: minimum 250 metric tonnes

Specifications: at least 99.5pc propylene

Basis: cif

The price of supply delivered by pipeline, ship, barge or rail. Where the point of delivery is inland from a northern European port then an allowance of €30/t is made for the additional delivery costs. Spot prices are assessed as a range not normally wider than €50/t.

The spot propylene market is illiquid and an element of judgment is applied in spot assessments.

Cif NWE chemical grade propylene spot

Location: northwest Europe

Volume: minimum 250 metric tonnes

Specifications: minimum 95pc purity and maximum of 5pc propane. Suitable for use by all CGP consumers for production of polypropylene, oxo-alcohols, acrylonitrile and others.

Basis: cif

The price of supply delivered by pipeline, ship, barge or rail. Where the point of delivery is inland from a northern European port then an allowance of €30/t is made for the additional delivery costs. Spot prices are assessed as a range not normally wider than €50/t.

The spot propylene market is illiquid and an element of judgment is applied in spot assessments.

Related assessments

European acrylonitrile monthly feedstock cost delta

A calculated €/t assessment of the monthly change in the cost of feedstock for European acrylonitrile production.

The price is calculated as $1.1 * \text{the month-on-month change in propylene prices} + 0.5 * \text{the month-on-month change in ammonia prices}$.

The propylene price change is the western Europe PGP monthly contract price for the named contract month less the western Europe PGP monthly contract price for the previous month.

The ammonia price change is the average of weekly price assessments for cfr northwest Europe ammonia, including duty, converted to €/t, published in Argus Ammonia during the previous month less the average of the same published the month earlier.

See the [Argus Ammonia methodology](#).

For example, the April 2019 European acrylonitrile monthly feedstock cost delta would be calculated as

$1.1 * \text{the difference between April and March 2019 western Europe monthly propylene contract prices} + 0.5 * \text{the difference between the average of northwest Europe ammonia prices published in March and those published in February}$

The resulting European acrylonitrile monthly feedstock cost delta is rounded to a whole number for publication.

The feedstock cost delta is published in the first Argus Propylene and Derivatives report for which there is a settled underlying propylene contract price, typically the first report of the month.

Polypropylene

Northwest Europe contract prices are for the named month.

- PP homopolymer
- PP copolymer

See the [Argus Global Polypropylene methodology](#).

Asia-Pacific

Weekly spot prices

Weekly spot prices are assessed as a low-high range based on spot trades, bids and offers recorded during the week. In southeast Asia, price assessments also include differentials to northeast Asia price assessments.

Propylene fob northeast Asia

Specification: 99.5pc propylene

Locations: South Korea, Japan, Taiwan and China

Timing: 15-50 days after assessment date

Volume: minimum 1,500 metric tonnes

Basis: fob northeast Asia

Propylene cfr northeast Asia

Specification: 99.5pc propylene
 Locations: South Korea, Japan, Taiwan and China
 Timing: 15-50 days after assessment date
 Volume: minimum 1,500 metric tonnes
 Basis: cfr northeast Asia

Propylene fob southeast Asia

Specification: 99.5pc propylene
 Locations: Singapore, Thailand, Malaysia, Indonesia, Philippines, Vietnam, India.
 Timing: 15-50 days after assessment date
 Volume: minimum 1,500 metric tonnes
 Basis: fob southeast Asia

Propylene cfr southeast Asia

Specification: 99.5pc propylene
 Locations: Singapore, Thailand, Malaysia, Indonesia, Philippines, Vietnam, India.
 Timing: 15-50 days after assessment date
 Volume: minimum 1,500 metric tonnes
 Basis: cfr southeast Asia

China domestic propylene oxide

The China domestic propylene oxide spot assessment is published weekly in \$/t and Yn/t based on spot market activity, including trades, bids and offers since the previous assessment.
 Specification: 99.95pc propylene oxide
 Timing: delivery in 1-2 weeks
 Volume: 200-500t in trade lots
 Basis: delivery by tank lorry to east China (Shanghai, Zhejiang, Jiangsu) from within 100-300km

East China domestic polymer grade propylene

Specification: 99.5pc propylene
 Locations: east China (including Zhejiang, Shanghai and southern Jiangsu south of Yangzi River)
 Timing: delivery in 0-3 days
 Volume: 200t-500t lots
 Basis: ex-tank

Sinopec east China domestic propylene (listed)

Current official Sinopec selling prices for polymer grade propylene on the day of publication. Ex-tank basis east China.

Taiwan PG propylene contract

A contract price agreed by domestic Taiwanese producer CPC and its downstream customers. Propylene is delivered by pipeline and the contract price formula includes some portion of the cost basis (naphtha) and the market price (ethylene).

The monthly Taiwan Contract Price is the price established by CPC and its contract customers each month. Argus publishes this price in the last report of the month following delivery of the contract. For example, the CP propylene contract price for July will be published in the final August report. Contract settlement prices are confirmed with CPC. Contract settlement prices will not be revised based on new information received after publication.

Specification: 99.5pc propylene
 Locations: Taiwan
 Volume: as per contracted quantity between CPC and its customer
 Basis: pipeline delivered basis to buyer.

Related assessments**Acrylonitrile cfr China**

The acrylonitrile cfr China assessment is published every two weeks based on spot market activity including trades, bids and offers since the previous assessment.

Specification: 99.0pc acrylonitrile
 Timing: 3-8 weeks from day of publication
 Volume: 1,500-2,000t
 Basis: cfr China

Polypropylene

cfr China spot prices

- PP raffia
- PP copolymer
