Methodology overview

Methodology rationale

Argus strives to construct methodologies that reflect the way the market trades. Argus aims to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, the specific currencies, volume units, locations and other particulars of an assessment are determined by industry conventions.

In the base metals, minor metals, ferro-alloys and rare earths markets, Argus publishes physical market prices in the open market as laid out in the specifications and methodology guide. Argus uses the trading period deemed by Argus to be most appropriate, in consultation with industry, to capture market liquidity.

In order to be included in the assessment process, deals must meet the minimum volume, delivery, timing and specification requirements in our methodology. In illiquid markets, and in other cases where deemed appropriate, Argus assesses the range within which product could have traded by applying a strict process outlined later in this methodology.

Survey process

Argus price assessments are informed by information received from a wide cross section of market participants, including producers, consumers and intermediaries. Argus reporters engage with the industry by proactively polling participants for market data. Argus will contact and accept market data from all credible market sources including front and back office of market participants and brokers. Argus will also receive market data from electronic trading platforms and directly from the back offices of market participants. Argus will accept market data by telephone, instant messenger, email or other means.

Argus encourages all sources of market data to submit all market data to which they are a party that falls within the Argus stated methodological criteria for the relevant assessment. Argus encourages all sources of market data to submit transaction data from back office functions.

Throughout all markets, Argus is constantly seeking to increase the number of companies willing to provide market data. Reporters are mentored and held accountable for expanding their pool of contacts. The number of entities providing market data can vary significantly from day to day based on market conditions.

For certain price assessments identified by local management, if more than 50pc of the market data involved in arriving at a price assessment is sourced from a single party the supervising editor will engage in an analysis of the market data with the primary reporter to ensure that the quality and integrity of the assessment has not been affected.

Market data usage

In each market, Argus uses the methodological approach deemed to be the most reliable and representative for that market. Argus will utilise various types of market data in its methodologies, to include:

- Transactions
- Bids and offers

- Other market information, to include spread values between grades, locations, timings, and many other data.

In many markets, the relevant methodology will assign a relatively higher importance to transactions over bids and offers, and a relatively higher importance to bids and offers over other market information. Certain markets however will exist for which such a hierarchy would produce unreliable and non-representative price assessments, and so the methodology must assign a different relative importance in order to ensure the quality and integrity of the price assessment. And even in markets for which the hierarchy normally applies, certain market situations will at times emerge for which the strict hierarchy would produce non-representative prices, requiring Argus to adapt in order to publish representative prices.

Verification of transaction data

Reporters carefully analyse all data submitted to the price assessment process. These data include transactions, bids, offers, volumes, counterparties, specifications and any other information that contributes materially to the determination of price. This high level of care described applies regardless of the methodology employed. Specific to transactions, bids, and offers, reporters seek to verify the price, the volume, the specifications, location basis, and counterparty. In some transactional average methodologies, reporters also examine the full array of transactions to match counterparties and arrive at a list of unique transactions. In some transactional average methodologies, full details of the transactions verified are published electronically and are accessible by subscribers. The deals are also published in the daily report.

Several tests are applied by reporters in all markets to transactional data to determine if it should be subjected to further scrutiny. If a transaction has been identified as failing such a test, it will receive further scrutiny. For assessments used to settle derivatives and for many other assessments, Argus has established internal procedures that involve escalation of inquiry within the source's company and escalating review within Argus management. Should this process determine that a transaction should be excluded from the price assessment process, the supervising editor will initiate approval and, if necessary, documentation procedures.

Primary tests applied by reporters

- Transactions not transacted at arm's length, including deals between related parties or affiliates.
- Transaction prices that deviate significantly from the mean of all transactions submitted for that day.
- Transaction prices that fall outside of the generally observed lows and highs that operated throughout the trading day.
- Transactions that are suspected to be a leg of another transaction or in some way contingent on an unknown transaction.
- Single deal volumes that significantly exceed the typical transaction volume for that market.
- Transaction details that are identified by other market participants as being for any reason potentially anomalous and perceived by Argus to be as such.
- Transaction details that are reported by one counterparty differently than the other counterparty.

- Any transaction details that appear to the reporter to be illogical or to stray from the norms of trading behaviour. This could include but is not limited to divergent specifications, unusual delivery location and counterparties not typically seen.
- Transactions that involve the same counterparties, the same price and delivery dates are checked to see that they are separate deals and not one deal duplicated in Argus records.

Secondary tests applied by editors for transactions identified for further scrutiny

Transaction tests

- The impact of linkage of the deal to possible other transactions such as contingent legs, exchanges, options, swaps, or other derivative instruments. This will include a review of transactions in markets that the reporter may not be covering.
- The nature of disagreement between counterparties on transactional details.
- The possibility that a deal is directly linked to an offsetting transaction that is not publicly known, for example a “wash trade” which has the purpose of influencing the published price.
- The impact of non-market factors on price or volume, including distressed delivery, credit issues, scheduling issues, demurrage, or containment.

Source tests

- The credibility of the explanation provided for the outlying nature of the transaction.
- The track record of the source. Sources will be deemed more credible if they
 - Regularly provide transaction data with few errors.
 - Provide data by Argus’ established deadline.
 - Quickly respond to queries from Argus reporters.
 - Have staff designated to respond to such queries.
- How close the information receipt is to the deadline for information, and the impact of that proximity on the validation process.

Assessment guidelines

When insufficient, inadequate, or no transaction information exists, or when Argus concludes that a transaction based methodology will not produce representative prices, Argus reporters will make an assessment of market value by applying intelligent judgment based on a broad array of factual market information. Reporters must use a high degree of care in gathering and validating all market data used in determining price assessments, a degree of care equal to that applying to gathering and validating transactions. The information used to form an assessment could include deals done, bids, offers, tenders, spread trades, exchange trades, fundamental supply and demand information and other inputs.

The assessment process employing judgment is rigorous, replicable, and uses widely accepted valuation metrics. These valuation metrics mirror the process used by physical commodity traders to internally assess value prior to entering the market with a bid or offer. Applying these valuation metrics along with sound judgment significantly narrows the band within which a commodity can be assessed, and greatly increases the accuracy and consistency of the

price series. The application of judgment is conducted jointly with the supervising editor, in order to be sure that guidelines below are being followed. Valuation metrics include the following:

Relative value transactions

Frequently transactions occur which instead of being an outright purchase or sale of a single commodity, are instead exchanges of commodities. Such transactions allow reporters to value less liquid markets against more liquid ones and establish a strong basis for the exercise of judgment.

- Exchange one commodity for a different commodity in the same market at a negotiated value.
- Exchange delivery dates for the same commodity at a negotiated value.
- Exchange a commodity in one location for the same commodity at another location at a negotiated value.

Bids and offers

If a sufficient number of bids and offers populate the market, then in most cases the highest bid and the lowest offer can be assumed to define the boundaries between which a deal could be transacted.

Comparative metrics

- The relative values between compared commodities are readily discussed in the market and can be discovered through dialogue with market participants. These discussions are the precursor to negotiation and conclusion of transactions.
- Comparison to the same commodity in another market centre.
- Comparison to a more actively traded but slightly different specification commodity in the same market centre.
- Comparison to the same commodity traded for a different delivery timing.
- Comparison to the commodity’s primary feedstock or primary derived product(s).
- Comparison to trade in the same commodity but in a different modality (as in barge versus oceangoing vessel) or in a different total volume (as in full cargo load versus partial cargo load).

Volume minimums and transaction data thresholds

Argus typically does not establish thresholds strictly on the basis of a count of transactions, as this could lead to unreliable and non-representative assessments and because of the varying transportation infrastructure found in all commodity markets. Instead, minimum volumes are typically established which may apply to each transaction accepted, to the aggregate of transactions, to transactions which set a low or high assessment or to other volumetrically relevant parameters.

For price assessments used to settle derivatives, Argus will seek to establish minimum transaction data thresholds and when no such threshold can be established Argus will explain the reasons. These thresholds will often reflect the minimum volumes necessary to produce a transaction-based methodology, but may also establish minimum deal parameters for use by a methodology that is based primarily on judgment.

Should no transaction threshold exist, or should submitted data fall below this methodology's stated transaction data threshold for any reason, Argus will follow the procedures outlined elsewhere in this document regarding the exercise of judgment in the price assessment process.

Transparency

Argus values transparency in energy markets. As a result, where available, we publish lists of deals in our reports that include price, basis, counterparty and volume information. The deal tables allow subscribers to cross check and verify the deals against the prices. Argus feels transparency and openness is vital to developing confidence in the price assessment process.

Swaps and forwards markets

Argus publishes forward assessments for numerous markets. These include forward market contracts that can allow physical delivery and swaps contracts that swap a fixed price for the average of a floating published price. Argus looks at forward swaps to inform physical assessments but places primary emphasis on the physical markets.

Publications and price data

Argus base metals, minor metals, ferro-alloys and rare earths prices are published in the Argus Non-Ferrous Markets report. Subsets of these prices appear in other Argus market reports and newsletters in various forms. The price data are available independent of the text-based report in electronic files that can feed into various databases. These price data are also supplied through various third-party data integrators. The Argus website also provides access to prices, reports and news with various web-based tools. All Argus prices are kept in a historical database and available for purchase. Contact your local Argus office for information.

A publication schedule is available at www.argusmedia.com

Corrections to assessments

Argus will on occasion publish corrections to price assessments after the publication date. We will correct errors that arise from clerical mistakes, calculation errors, or a misapplication of our stated methodology. Argus will not retroactively assess markets based on new information learned after the assessments are published. We make our best effort to assess markets based on the information we gather during the trading day assessed.

Ethics and compliance

Argus operates according to the best practices in the publishing field, and maintains thorough compliance procedures throughout the firm. We want to be seen as a preferred provider by our subscribers, who are held to equally high standards, while at the same time maintaining our editorial integrity and independence. Argus has a strict ethics policy that applies to all staff. The policy can be found on our website at www.argusmedia.com. Included in this policy are restrictions against staff trading in any energy commodity or energy related stocks, and guidelines for accepting gifts. Argus also has strict policies regarding central archiving of email and instant messenger communication, maintenance and archiving of notes, and archiving of spreadsheets and deal lists used in the price assessment process. Argus publishes prices that report and reflect prevailing levels

for open-market arms length transactions (please see the [Argus Global Compliance Policy](#) for a detailed definition of arms length).

Consistency in the assessment process

Argus recognises the need to have judgment consistently applied by reporters covering separate markets, and by reporters replacing existing reporters in the assessment process. In order to ensure this consistency, Argus has developed a programme of training and oversight of reporters. This programme includes:

- A global price reporting manual describing among other things the guidelines for the exercise of judgment
- Cross-training of staff between markets to ensure proper holiday and sick leave backup. Editors that float between markets to monitor staff application of best practices
- Experienced editors overseeing reporting teams are involved in daily mentoring and assisting in the application of judgment for illiquid markets
- Editors are required to sign-off on all price assessments each day, thus ensuring the consistent application of judgment.

Review of methodology

The overriding objective of any methodology is to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, Argus editors and reporters are regularly examining our methodologies and are in regular dialogue with the industry in order to ensure that the methodologies are representative of the market being assessed. This process is integral with reporting on a given market. In addition to this ongoing review of methodology, Argus conducts reviews of all of its methodologies and methodology documents on at least an annual basis.

Argus market report editors and management will periodically and as merited initiate reviews of market coverage based on a qualitative analysis that includes measurements of liquidity, visibility of market data, consistency of market data, quality of market data and industry usage of the assessments. Report editors will review:

- Appropriateness of the methodology of existing assessments
- Termination of existing assessments
- Initiation of new assessments.

The report editor will initiate an informal process to examine viability. This process includes:

- Informal discussions with market participants
- Informal discussions with other stakeholders
- Internal review of market data

Should changes, terminations, or initiations be merited, the report editor will submit an internal proposal to management for review and approval. Should changes or terminations of existing assessments be approved, then formal procedures for external consultation are begun.

Changes to methodology

Formal proposals to change methodologies typically emerge out of the ongoing process of internal and external review of the meth-

odologies. Formal procedures for external consultation regarding material changes to existing methodologies will be initiated with an announcement of the proposed change published in the relevant Argus report. This announcement will include:

- Details on the proposed change and the rationale
- Method for submitting comments with a deadline for submissions
- For prices used in derivatives, notice that all formal comments will be published after the given consultation period unless submitter requests confidentiality.

Argus will provide sufficient opportunity for stakeholders to analyse and comment on changes, but will not allow the time needed to follow these procedures to create a situation wherein unrepresentative or false prices are published, markets are disrupted, or market participants are put at unnecessary risk. Argus will engage with industry throughout this process in order to gain acceptance of proposed changes to methodology. Argus cannot however guarantee universal acceptance and will act for the good order of the market and ensure the continued integrity of its price assessments as an overriding objective.

Following the consultation period, Argus management will commence an internal review and decide on the methodology change. This will be followed by an announcement of the decision, which will be published in the relevant Argus report and include a date for implementation. For prices used in derivatives, publication of stakeholders' formal comments that are not subject to confidentiality and Argus' response to those comments will also take place.

Market overview

Argus Non-Ferrous Markets

Argus Non-Ferrous Markets provides price assessments for the global markets in base metals, minor metals, ferro-alloys and rare earths.

Average price indexes

In addition to outright prices, the service provides month-to-date and final-month average indexes.

Indexes are calculated by summing the value of published assessments and dividing by the number of assessments published in a given month. The final index value for a given month is the average calculated on the final day of assessment of that month. The report shows the evolution of the current-month index, as well as the final index value for the previous month.

Timing and indexation

Argus Non-Ferrous Markets contains twice-weekly, weekly and monthly assessments. Those assessments are republished in the Argus Database and available electronically for each publication date. For example, a weekly price assessed on Wednesdays will be republished on Thursday and on each subsequent publication date until the next day of assessment, in this example, the following Wednesday.

Users are advised that the published month-to-date and final indexes may differ from those calculated using Argus or third-party tools, because of this daily republication of price assessments.

Publication schedule

Argus may not publish certain assessments on public holidays and may publish others on the business day before or after the holiday depending on frequency, market and location of the assessment. Argus does not publish non-ferrous coverage on Saturday or Sunday, even when those days are treated as working days in the market being reported.

Chinese daily and twice weekly prices are not assessed on public holidays in China. Weekly Chinese price assessments are made the working day before Chinese public holidays. Twice monthly Chinese price assessments are made the working day after Chinese public holidays.

Indian twice weekly prices are not assessed on public holidays in India and are uploaded to the Argus database as unchanged.

European twice weekly prices are not assessed on UK public holidays and no uploads are made.

Weekly US prices are assessed and uploaded on the working day before US public holidays.

Monthly prices typically published at the start of the calendar month are published on the first working day after a holiday. Monthly prices typically published at the end of the month are published on the last working day before a holiday.

Argus Non-Ferrous Markets is not published on UK public holidays. A publication schedule is available at www.argusmedia.com

Assessment process

Price assessments are based on data and information gathered by specialist market reporters by telephone, email and instant messaging. Reporters contact a wide cross-section of market participants, including producers, consumers, marketers, traders and other intermediaries. As many participants as possible are contacted. Where relevant, Argus may also take into account information from exchanges, government agencies and trade associations.

Argus welcomes transaction data and survey input from all market participants and strongly encourage full disclosure of all relevant details of all deals concluded. All information received is crosschecked and tested against other market information. Any anomalies are excluded.

When gathering data on transactions, reporters seek to obtain the price level, volume, specifications and delivery terms. Reported trades are tested against wider market conditions and must be deemed repeatable in order to be included in the assessment. Reporters apply a series of primary and where appropriate secondary tests when verifying trades. For example, transactions which are priced significantly above or below the prevailing market may be excluded from the assessment process.

Spot transactions can vary in size between markets, and the significance of a particular spot trade to the price assessment process must be gauged in light of trade patterns in the relevant market and prevailing market conditions.

Assessing illiquid markets

Where possible, assessments are based on verified and repeatable spot trades. In illiquid market conditions, with a lack of verified spot trades, reporters apply intelligent judgment to form assessments based on bids and offers and/or other relevant market information including a market survey of participants' view of where price levels would stand if trade were to take place.

Bids and offers must be considered repeatable for inclusion in the assessment process, and are tested against the wider market through contact with as many market participants as possible.

Additional information that may be taken into account when there are no verified spot trades during the assessment period includes:

- Bids and offers
- Market participants' view of prevailing price levels
- Verified trades in related and/or correlated markets
- Tenders
- Exchange prices
- Other relevant information including supply and demand fundamentals, and current market trends.

Reporters must use a high degree of care in gathering and validating all market data used in determining price assessments, a degree of care equal to that applying to gathering and validating transactions.

Aluminium

Introduction

Argus Non-Ferrous Markets publishes weekly aluminium price assessments.

Basis of assessment

Assessments are for the named material delivered by truck, meeting the quantity and timing criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Notes

- P1020 US midwest premium: assessed at a differential to LME official cash price for aluminium
- P1020 US midwest spot monthly average: the average of the midpoints of the low and high spot premium assessments published in the named calendar month
- Primary 6061 US billet premium: assessed at a differential to P1020 US midwest assessment
- Primary 6063 US billet premium: assessed at a differential to P1020 US midwest assessment
- International spot premiums: assessed at a differential to the LME official cash price for aluminium
- International forward/three-month premiums: assessed at a differential to the LME official cash price for aluminium on the day of shipment
- In-warehouse Shanghai aluminium ingot premium: assessed as a differential to the SHFE

Low-carbon aluminium

The price of primary aluminium with maximum emissions of 4t of Scope 1 and Scope 2 CO₂ emissions per tonne of aluminium produced meeting the specifications below.

As defined by the Greenhouse Gas Protocol, Scope 1 refers to the direct carbon emissions from a metal-producing facility and Scope 2 refers to the carbon emissions from the facility's power source.

Prices are assessed and published monthly, as an upcharge over the price of standard aluminium based on trade, bids, offers and other market information, and are also published as weekly outright duty-paid and duty-unpaid values by applying the upcharge to the underlying Argus assessments.

Feedstocks

Alumina and bauxite assessments are for the named material meeting the quantity and timing criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Timing of assessment

Prices are assessed and published weekly or monthly on the day specified in the table below.

US markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

European markets

Market information received after 5pm London time on the day of assessment may not be included in the assessment process.

Asia-Pacific markets

Market information received after 4pm Singapore time on the day of assessment may not be included in the assessment process.

Rounding

Assessments are published to up to four decimal places, ending in 0 or 5.

Currency and unit

Prices are assessed and published in the currencies and units specified below.

Aluminium specifications								
Assessment	Quality	Transacted/ transactable	Day of assessment	Min lot size	Timing	Currency/ unit	Delivery	
Aluminium premiums								
P1020 duty paid cif Japan forward quarter	LME P1020A, 99.7% purity	since last assessment	*	250t	3 months forward	\$/t	cif Osaka, Tokyo, Norita	
Note: prices are assessed and published on or before the 15th calendar day of the quarter based on market activity								
P1020 duty paid cif Japan spot	LME P1020A, 99.7% purity	since last assessment	Thursday	25t	30 days	\$/t	cif Osaka, Tokyo, Norita	
P1020 duty unpaid cif Thailand spot	LME P1020A, 99.7% purity	since last assessment	Thursday	25t	30 days	\$/t	in-warehouse	
P1020 duty unpaid cif Vietnam spot	LME P1020A, 99.7% purity	since last assessment	Thursday	25t	30 days	\$/t	in-warehouse

P1020 duty paid spot in-warehouse Rotterdam	LME P1020A, 99.7% purity	since last assessment	Wednesday	25t	30 days	\$/t	in-warehouse	
P1020 duty unpaid 3-month in-warehouse Rotterdam	LME P1020A, 99.7% purity	since last assessment	Wednesday	25t	3 months forward	\$/t	in-warehouse	
P1020 duty unpaid spot in-warehouse Rotterdam	LME P1020A, 99.7% purity	since last assessment	Wednesday	25t	30 days	\$/t	in-warehouse	
P1020 low-carbon upcharge in-warehouse Rotterdam	LME P1020A, 99.7% purity	since last assessment	monthly, first Wednesday	25t	within 3 months	\$/t	in-warehouse	
P1020 low-carbon premium duty paid in-warehouse Rotterdam	LME P1020A, 99.7% purity	since last assessment	Wednesday	25t	within 3 months	\$/t	in-warehouse	
P1020 low-carbon premium duty unpaid in-warehouse Rotterdam	LME P1020A, 99.7% purity	since last assessment	Wednesday	25t	within 3 months	\$/t	in-warehouse	
99.7% ingot premium to SHFE ex-warehouse Shanghai	SHFE specification GB/T 1196-2023 99.7pc purity	since last assessment	Wednesday/Friday	25t	prompt	yuan/t	ex-warehouse	
P1020 US midwest spot	LME P1020A, 99.7% purity	since last assessment	Wednesday	truck-load	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee	
P1020 US midwest spot monthly average	Calculated as the average of the midpoints of the low and high spot premium assessments published in the named calendar month. Published on the last Wednesday of the month.							
P1020 US midwest transaction	calculated as the LME cash price settlement + the Argus P1020 US midwest premium assessment							
6061 billet US spot	Aluminum Association 6061	since last assessment	Wednesday	truck-load	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee	
6061 billet del US transaction	calculated as the Argus P1020 US midwest spot transaction price + the Argus 6061 billet price assessment							
6063 billet del US spot	Aluminum Association 6063	since last assessment	Wednesday	truck-load	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee	
6063 billet del US transaction	calculated as the Argus P1020 US midwest transaction price + the Argus 6063 billet price assessment							
6063 billet del Italy	Aluminum Association 6063 primary billet premium	since last assessment	Wednesday	25t	60 days	\$/t	northern Italy	
6063 billet del Germany	Aluminum Association 6063 primary billet premium	since last assessment	Wednesday	25t	30 days	\$/t	Ruhr region	
6063 extrusion duty paid spot in-warehouse Rotterdam	calculated as the higher of the Argus 6063 billet del Italy price assessment plus the assessed cost of freight to Rotterdam and the Argus 6063 billet del Germany price assessment plus the assessed cost of freight to Rotterdam							
Feedstocks								
Alumina metallurgical grade ex-works China	Al ₂ O ₃ 98.5% minimum, SiO ₂ 0.04% maximum, Fe ₂ O ₃ 0.02% maximum	since last assessment	Friday	1,000t	prompt	Yn/t	ex-works China	
Bauxite 45% Al ₂ O ₃ cif China	Al ₂ O ₃ 45% minimum, SiO ₂ 5% maximum	since last assessment	Friday	40,000t	prompt	\$/t	cif China	
Bauxite 45% Al ₂ O ₃ fob Guinea	Al ₂ O ₃ 45% minimum, SiO ₂ 5% maximum, 40,000t for prompt loading, export duty paid, calculated as the cif China 45pc Al ₂ O ₃ bauxite assessment less a weekly average of the assessed 180,000t Guinea-north China bauxite freight rate. See the Argus Dry Freight methodology .							

Copper and brass

Argus Non-Ferrous Markets publishes weekly copper price assessments.

Basis of assessment

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Notes

- Cathode premiums and cash spreads, which are assessed as:
 - US: a differential to the Comex current month (spot) copper settlement
 - Europe and Asia: a differential to LME official cash settlement

Timing of assessment

Prices are assessed and published weekly on the day specified in the table below.

US markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

European markets

Market information received after 5pm London time on the day of assessment may not be included in the assessment process.

Asia-Pacific markets

Market information received after 5pm Beijing time on the day of assessment may not be included in the assessment process.

Rounding

Assessments are published to up to four decimal places, ending in 0 or 5.

Scrap prices

Brass/bronze alloys del US

- C89833
- C89836

China cash spreads

- #1 cif China cash spread
- #2 cif China cash spread
- Bare bright cif China cash spread

See the [Argus Scrap Markets methodology](#).

Copper TC/RC Indexes

Treatment charges and refining charges (TC/RCs) for clean copper concentrate are published as outright prices of spot treatment and refining for clean copper concentrate meeting the specification below.

Charges assume cif China delivery of the concentrate within three months of the date of agreement and a refined copper price equal to the LME settlement price for the third-forward calendar month (a "quotation period" or "QP" of M+3). TC/RCs priced in reference to another QP will be standardised to M+3 using the spread between relevant futures closing prices.

Treatment charges are calculated weekly as a volume-weighted average of agreed charges meeting or normalized to the specification below and a survey of active market participants.

If five or fewer index-relevant deals are reported, the volume-weighted average of deals will account for 50pc of the final index. The volume-weighted average of deals will account for a larger share of the final index when more deals are reported, rising by 10 percentage points for each additional deal. When 10 or more index-relevant deals are reported, the volume-weighted average will make up the entirety of the index.

Refining charges are calculated as 10pc of the assessed treatment charge.

Calendar month and month-to-date averages are also published.

TC currency/unit: \$/t

RC currency/unit: ¢/lb

Payment terms: on sight L/C

Minimum tonnage: 5,000t

Delivery: within three months

QP: M+3

Cut off time: 5.30pm Beijing time on Friday

Specification:

Cu (%) base 25: min 17, max 35

Au (g/dmt): base 1.0: max 50

Ag (g/dmt) base 80: max 400

S (%) base 30: min 20, max 40

Fe (%) base 25: min 15, max 35

Pb (%) base 0.07: max 6

Zn (%) base 2.0: max 4 (Pb+Zn<4%)

As (%) base 0.15: max 0.5

Sb (%) base 0.015: max 0.2

F (%) base 0.01: max 0.1

Cd (%) base 0.025: max 0.05

Hg (ppm) base 2.0: max 10

Bi (ppm) base 100: max 2000

Two sets of TC/RC indexes are published, one for treatment and refining charges paid by smelters within China and one for treatment and refining charges paid by intermediary traders.

Copper concentrate smelter purchase TC/RCs

Treatment and refining charges paid by smelters within China.

Copper concentrate trader purchase TC/RCs

Treatment and refining charges paid by traders within China.

Mean indexes

Argus also publishes mean indexes, the average of the published smelter and trader treatment or refining charges.

Treatment charge mean index: the average of the published smelter and trader treatment charge indexes

Refining charge mean index: the average of the published smelter and trader refining charge indexes

Copper specifications							
Assessment	Quality	Transacted/ transactable	Day of assessment	Min lot size	Timing	Currency/ unit	Delivery
Copper cathode premiums							
Grade A del US midwest	ASTM B115-00	since last assessment	Wednesday	truckload	30 days	\$/lb	del Iowa, Illinois, Ohio
Grade A del US midwest transaction	calculated as the Comex copper spot settlement + the Argus grade A del US midwest price assessment					\$/lb

Grade A premium to SHFE ex-warehouse China	Grade A cathode conforming to GB/T467-2010 – Cu-CATH-1 or BS EN 1978:1998 – Cu-CATH-1	day of assessment	Tuesday/ Thursday	25t	prompt	Yn/t	ex-warehouse China
Grade A cathode import arbitrage	The spread between the China ex-warehouse grade A cathode price calculated using the SHFE front-month contract price and the assessed ex-warehouse premium described above and the cif Shanghai price calculated using a derived LME front-month price at 11am Shanghai time and the assessed cif premium described above, converted to yuan per tonne plus VAT less an assessed administrative charge. The LME front-month price used in the calculation is derived from the previous day's settlement of the LME front-month and 3-month prices and the current day's 3-month price at 11am Shanghai time. Administrative charges are assessed at least quarterly.						

Nickel

Introduction

Argus Non-Ferrous Markets publishes price assessments and market commentary on the international nickel markets.

Basis of assessment

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are published as a low-high range of prices that traded, or could have traded, on the day or during the period shown.

Unless stated, price assessments are for physical material for prompt delivery, defined as delivery within four weeks.

Note

- Nickel cathode premiums are assessed as a differential to the LME official cash price

Timing of assessment

Weekly prices are assessed and published on Thursday, except where noted below. Monthly prices are assessed and published on the last publication day of the month.

US markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

European markets

Market information received after 5pm London time on the day of assessment may not be included in the assessment process.

China markets

Market information received after 4pm Beijing time on the day of assessment may not be included in the assessment process.

Currency/unit conversions

Argus converts several price assessments to \$/t, Yn/t and Yn/mtu and removes VAT where appropriate.

Converted prices are calculated for:

- Nickel sulphate min 22% ex-works China (excluding VAT)
- Nickel pig iron 10-14% cif China
- Nickel matte 70% cif China
- Mixed hydroxide precipitate (MHP) 37%min cif China

Rounding

Prices assessed in US dollars are rounded to two decimal places, with the exception of nickel pig iron cif China, mixed hydroxide precipitate cif China and nickel mate cif China which are rounded to the nearest 10¢/mtu. Prices assessed in Chinese yuan are rounded to whole numbers.

Indonesia nickel indexes

Argus Non-Ferrous Markets includes nickel indexes republished from the Argus Indonesian Nickel Index (INI) Report. See the [Argus Indonesian Nickel Index \(INI\) Report methodology](#).

- Indonesian Nickel Index NPI 10-14% fob Indonesia main port
- Indonesian Nickel Index MHP nickel payable 37% min fob Indonesia main port
- Indonesian Nickel Index MHP cobalt payable 2-5% min fob Indonesia main port
- Indonesian Nickel Index matte 70% fob Indonesia main port

Lead and zinc

Introduction

Argus Non-Ferrous Markets publishes price assessments and market commentary on the international lead and zinc markets.

Basis of assessment

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are published as a low-high range of prices that traded, or could have traded, on the day or during the period shown.

Unless stated, price assessments are for physical material for prompt delivery, defined as delivery within four weeks.

Note

- Special high grade zinc premiums are assessed as a differential to the LME official cash price
- Lead ingot premiums are assessed as a differential to the LME official cash price

Timing of assessment

Zinc prices are assessed and published weekly on the day shown below. Lead prices are assessed and published weekly on Tuesday.

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Nickel specifications

Assessment	Quality	Minimum quantity	Currency/unit	Assessment frequency	Transacted/transactable	Timing	Basis
Nickel							
Ore 1.8% Ni fca China, Yn/wmt	Nickel 1.8%, moisture 35% maximum, mud, bulk, includes VAT	10,000t	Yn/wet metric tonne	twice weekly (Tuesday/Thursday)	on day of assessment	prompt	fca China

Minor metals

Introduction

Argus Non-Ferrous Markets publishes price assessments and market commentary on the international minor metals markets.

Basis of assessment

Minor metals price assessments are for spot physical material for prompt delivery, defined as delivery within four weeks. Product specifications for each assessment, such as currency, unit of trade and quality, follow recognised industry standards such as norms published by the Minor Metals Trade Association and other widely used specifications.

Price assessments are published as low-high ranges.

Assessments are for material certified as conflict free using recognised traceability systems in compliance with relevant legislation, and delivered to the market through legal routes, with relevant export taxes paid.

Fob China assessments are basis export duty paid, including any export taxes levied by China, and VAT. Fob China prices are not inclusive of any import duty charged by the importing country. China domestic prices are basis ex-works, VAT paid, unless otherwise stated. European prices are basis in-warehouse Rotterdam, duty unpaid, unless otherwise stated. Fob US prices in-warehouse are inclusive of duties.

Note: titanium oxide concentrate is discussed and priced on a “fob China warehouse” basis involves the transfer of the product from the seller to the buyer at a port warehouse in China.

In most cases, information relating to material that falls outside of the stated specifications will not be used in the assessment process. Exceptions may be made if an acceptable and appropriate normalisation process can be applied.

In markets where liquidity is split across several locations, verified spot trades may be normalised to a single reference hub, for example by making adjustments for transportation costs, where appropriate and in line with market practice. See below for a full list of product specifications.

Ex-works US dollar conversions

Argus converts several ex-works price assessments to US dollar, VAT excluded prices by removing value-added tax from the relevant ex-works assessment and applying an exchange rate to create a \$/kg or \$/lb price.

Timing of assessment

The frequency and timing of each assessment are specified in the tables below.

US markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process. Monthly US price assessments are made and published on the last publication date of the month.

European and main port markets

Market information received after 4pm London time on the day of assessment may not be included in the assessment process. Monthly European price assessments are made and published on the first publication date of the month.

China markets

Market information received after 4pm Beijing time on the day of assessment may not be included in the assessment process.

Asia markets (excluding China)

Market information received after 4pm Singapore time on the day of assessment may not be included in the assessment process.

Rounding

Prices assessed in US dollars and Chinese yuan per kilogram are rounded to two decimal places. Prices assessed in Chinese yuan per tonne are rounded to whole numbers.

Super alloys and super alloy scrap

Argus Non-Ferrous Markets publishes daily calculated prices for super alloys and super alloy scrap.

Prices are calculated by weighting the price of component and feedstock metals according to formulas developed in collaboration with the industry. Formulas are revised at least quarterly or as market conditions change. Super alloy prices are published as single values in US dollars per pound (lb) calculated using a single set of weightings common across producers. Super alloy scrap prices are expressed as a low-high range in US dollars per pound to account for various discounts assumed by the industry. Month-to-date averages are also published.

Super alloys

- Inconel 718 vacuum melted del US processor
- Inconel 718 vacuum melted ex-works Europe
- Inconel 625 vacuum melted del US processor
- Inconel 625 vacuum melted ex-works Europe
- 7075 aluminium del US processor

Minor metals scrap

Introduction

Argus Non-Ferrous Markets publishes price assessments and market commentary on the minor metals scrap markets.

Basis of assessment

Minor metals scrap price assessments are for spot physical material for prompt delivery. Product specifications for each assessment, such as currency, unit of trade and quality, follow recognised industry standards, such as norms published by the Minor Metals Trade Association and other widely used specifications.

Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Assessments are for material certified as conflict free using recognised traceability systems in compliance with relevant legislation, and delivered to the market through legal routes, with relevant export taxes paid.

Argus assesses scrap collection prices typically paid by scrap dealers and processors to direct generators of the scrap such as manufacturers, known as industrial generators. These assessments include the cost of delivering product to the dealer or processor.

Timing of assessment

Weekly prices are assessed and published weekly on Tuesday. Monthly prices are assessed and published on the last publication day of each month. Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Rounding

Minor metals scrap price assessments are published to up to two decimal places.

Minor metals scrap specifications									
Assessment	Grade	Basis	Location	Duties/Tariffs	Minimum lot size	Form	Currency /unit	Timing	Assessment frequency
Molybdenum									
Scrap 99.7% airmelt del US consumer	molybdenum 99.7%	delivered	US	duty paid	2,000lbs	solids	\$/lb	within 30 days	monthly

99.9% scrap del US processor	tungsten 99.9% minimum; unprocessed scrap solids	delivered	US	duty paid	1,000-3,000lbs	solids	\$/lb	within 30 days	monthly

Minor metals indexes

Average price indexes

In addition to outright prices, the service provides month-to-date and final-month average indexes.

Indexes are calculated by summing the value of published assessments and dividing by the number of assessments published in a given month. The final index value for a given month is the average calculated on the final day of assessment of that month. The report shows the evolution of the current-month index, as well as the final index value for the previous month.

Timing and indexation

Argus Non-Ferrous Markets contains twice-weekly, weekly and monthly assessments. Those assessments are republished in the Argus Database and available electronically for each publication date. For example, a weekly price assessed on Wednesdays will be republished on Thursday and on each subsequent publication date until the next day of assessment, in this example, the following Wednesday.

Users are advised that the published month-to-date and final indexes may differ from those calculated using Argus or third-party tools, because of this daily republication of price assessments.

Indexes are published for:

Platinum group metals

Introduction

Argus Non-Ferrous Markets publishes a price assessment and market commentary for the US ruthenium market. Third party PGM prices are available via the Argus Metals Platform.

Basis of assessment

The US ruthenium price assessment is for spot physical material for prompt delivery. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Timing of assessment

The frequency and timing of the assessment is specified in the tables below. Information received after 5pm Houston time on the day of the assessment may not be included in the process.

Rounding

Price assessments are published to three decimal places.

Platinum group metals specifications

Assessment	Grade	Basis	Location	Duties/Tariffs	Minimum lot size	Form	Currency /unit	Timing	Assessment frequency
Ruthenium									
99.9% fob US warehouse	ruthenium 99.9% minimum	fob warehouse	US	duty paid	250 toz (troy ounces)	sponge or powder	\$/toz	delivered within 30 days	weekly (Tuesday)

Ferro-alloys and feedstocks

Introduction

Argus Non-Ferrous Markets publishes price assessments and market commentary on the international bulk and noble ferro-alloys and feedstocks markets.

Basis of assessment

Price assessments are for spot physical material for prompt delivery, defined as delivery within four weeks, with cash payment and in lump form unless otherwise stated. Packaging norms are in bags, loose in bulk, in containers or in drums, in line with market convention.

For US in-warehouse prices, the main delivery locations are Baltimore, Pittsburgh, Chicago, Houston and Decatur (Alabama); Portland (Oregon) and Los Angeles, with other warehouse locations also taken into account where appropriate. (See below for further details of ferro-alloy and ore specifications)

Fob China assessments are basis export duty paid, including any export taxes levied by China, and VAT. Fob China prices are not inclusive of any import duty charged by the importing country. China domestic prices are basis ex-works, VAT paid, unless otherwise stated. European prices are basis in-warehouse Rotterdam, duty unpaid unless otherwise stated. Fob US prices in-warehouse are inclusive of duties.

Nickel premiums are spreads to the last LME three-month official price.

Product specifications for each assessment such as currency, unit of trade and quality follow recognised industry standards such as norms published by the Minor Metals Trade Association and other widely used specifications.

Price assessments are published as low-high ranges.

In most cases, information relating to material that falls outside of the stated specifications will not be used in the assessment process. Exceptions may be made if an acceptable and appropriate normalisation process can be applied.

In markets where liquidity is split across several locations, verified spot trades may be normalised to a single reference hub, for example by making adjustments for transportation costs, where appropriate and in line with market practice. (See below for a full list of product specifications.)

Timing of assessment

The frequency and timing of each assessment are specified in the tables below.

Americas markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process. Monthly US price assessments are made and published on the last publication date of the month.

European markets

Market information received after 4pm London time on the day of assessment may not be included in the assessment process. Quarterly benchmark prices are posted by the main producer, usually around the first of each quarter.

China markets

Market information received after 4pm Beijing time on the day of assessment may not be included in the assessment process.

Asia markets (excluding China)

Market information received after 4pm Singapore time on the day of assessment may not be included in the assessment process. OMC chrome ore prices are published monthly by the producer, typically early in the month.

Rounding

Prices assessed in US dollars and fca China prices assessed in Chinese yuan are rounded to two decimal places. Other Chinese yuan-denominated prices are rounded to whole numbers.

Bulk alloy and feedstock specifications

Stainless steel

Introduction

Argus Scrap Markets publishes daily, weekly and monthly price assessments and market commentary on the US and international stainless steel scrap, flat rolled, cold rolled and bar markets.

Basis of assessment

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Surcharges are the arithmetic average of those announced by producers. European delivered cold rolled sheet and ex-warehouse China cold rolled coil transaction prices are assessed independently.

Timing

Monthly stainless steel prices and monthly flat rolled coil and flat rolled surcharge prices are assessed and published before the first day of each calendar month, except when European markets are unsettled at the end of the month. In those cases, the assessments will be made as early in the month as practical.

European markets

Market information received after 5pm London time on the day of assessment may not be included in the assessment process.

Asia-Pacific Markets

Coil market information received after 5pm Beijing time on the day of assessment may not be included in the assessment process.

Stainless steel and stainless steel scrap specifications

Alloy	Grade	Basis	Minimum lot size	Currency/unit	Timing	Assessment

Ferro-alloys and feedstocks indexes

Average price indexes

In addition to outright prices, the service provides month-to-date and final-month average indexes.

Indexes are calculated by summing the value of published assessments and dividing by the number of assessments published in a given month. The final index value for a given month is the average calculated on the final day of assessment of that month. The report shows the evolution of the current-month index, as well as the final index value for the previous month.

Timing and indexation

Argus Non-Ferrous Markets contains twice-weekly, weekly and monthly assessments. Those assessments are republished in the Argus Database and available electronically for each publication date. For example, a weekly price assessed on Wednesdays will be republished on Thursday and on each subsequent publication date until the next day of assessment, in this example, the following Wednesday.

Users are advised that the published month-to-date and final indexes may differ from those calculated using Argus or third-party tools, because of this daily republication of price assessments.

Indexes are published for:

Ferro-chrome

- HC basis 60% Cr 6-8% C ddp NWE
- LC Cr min 65% 0.10% C ddp Europe works

Rare earths and rare earth magnets

Introduction

Argus Non-Ferrous Markets publishes price assessments and market commentary on the international rare earths and rare earth magnet markets.

Basis of assessment

Price assessments are for physical material for spot delivery, with "spot" defined as delivery within four weeks. Assessments reflect the average value of spot material across the whole of the day of assessment.

Fob China assessments are basis export duty paid, including any export taxes levied by China. Fob China prices are not inclusive of any import duty charged by the importing country.

China domestic prices are basis ex-works, VAT paid, unless otherwise stated.

European prices are cif Rotterdam, duty paid, unless otherwise stated.

US prices are delivered duty paid US consumer.

Specifications such as currency, unit of trade and quality follow recognised industry standards.

Price assessments are published as low-high ranges.

In most cases, information relating to material that falls outside of the stated specifications will not be used in the assessment process. Exceptions may be made if an acceptable and appropriate normalisation process can be applied.

Timing of assessment

Prices are assessed and published daily, twice weekly (on Tuesday and Thursday), weekly (on Tuesday or Thursday), fortnightly (on Thursday) or monthly (on the first publication day of the month). See the table below for the frequency of each assessment.

European markets

Market information received after 4pm London time on the day of assessment may not be included in the assessment process.

China markets

Market information received after 3pm Beijing time on the day of assessment may not be included in the assessment process.

US markets

Market information received after 4pm Houston time on the day of the assessment may not be included in the assessment process.

Rounding

Prices assessed in US dollars are rounded to two decimal places. Prices assessed in Chinese yuan are rounded to whole numbers.

Metal 99% min China	Cerium 99% minimum; iron 0.25%, carbon 0.05%, silicon 0.03%, calcium 0.02%, total RE impurities 1% maximum	Yn/t	5t (+/-2%)	0.5kg (500g) ingots	UN drums	weekly	
Metal 99.9% min China	Cerium 99.9% minimum, iron 0.1%, carbon 0.03%, silicon 0.02%, calcium 0.01%, total RE impurities 0.1% maximum	Yn/t	1t (+/-2%)	0.5kg (500g) ingots	UN drums	weekly	
Oxide 99.5-99.9% China	Cerium oxide 99.5-99.9% minimum; iron 0.01%, silicon 0.03%, calcium 0.03%, chlorine 0.05%, sulphur 0.1%, RE impurities 0.1% maximum	Yn/t	5t (+/- 2%)	off-white/beige powder	1t bags or 25kg drums	twice weekly	

Dysprosium							
Metal 99% min China	Dysprosium 99% minimum; iron 0.01%, magnesium 0.01%, silicon 0.01%, calcium 0.075%, carbon 0.01%, aluminium 0.01%, oxygen 0.18%, total RE impurities 1% maximum	Yn/kg	20kg (+/-2%)	ingots	50kg drums	daily	
Oxide 99.5% min China	Dysprosium oxide 99.5% minimum; iron 0.005%, silicon 0.02%, calcium 0.03%, aluminium 0.05%, total RE impurities 0.5% maximum	Yn/kg	500kg (+/- 2%)	white powder	50kg drums	daily	
Erbium							
Oxide 99.5% min China	Erbium oxide 99.5% minimum; iron 0.05%, silicon 0.01%, calcium 0.02%, total RE impurities 0.5% maximum	Yn/t	1t (+/-2%)	pink powder	50kg drums	twice weekly	
Europium							
Oxide 99.99% min China	Europium oxide 99.99% minimum; iron 0.005%, silicon 0.002%, calcium 0.002%, nickel 0.001%, zinc 0.001%, aluminium 0.01%, total RE impurities 0.01% maximum	Yn/kg	50kg (+/-2%)	pink powder	50kg drums	monthly	
Ferro-dysprosium							
Dy 80% min	Dysprosium 79.6% minimum; iron 20.07%, magnesium 0.01%, silicon 0.013%, calcium 0.01%, carbon 0.032%, aluminium 0.019%, oxygen 0.028%, nickel 0.01% maximum	Yn/kg	200kg (+/-2%)	ingots	50kg drums	daily	
Ferro-gadolinium							
Gd 75% min ex-works China	Gadolinium 75%, iron 24% minimum; carbon 0.04% maximum	Yn/t	1t (+/-2%)	ingots	250kg drums	daily	
Gadolinium							
Metal 99% min China	Gadolinium 99% minimum; iron 0.15%, silicon 0.01%, calcium 0.05%, aluminium 0.01%, magnesium 0.01%, oxygen 0.25%, carbon 0.03%, chlorine 0.02%, RE impurities 1% maximum	Yn/t	100kg (+/-2%)	ingots	50kg drums	daily	
Oxide 99.5-99.9% min China	Gadolinium oxide 99.5-99.9% minimum; iron 0.002%, silicon 0.008%, calcium 0.01%, aluminium 0.63%max, total RE impurities 0.5% maximum	Yn/t	1t (+/- 2%)	white powder	50kg drums	daily	
Oxide 99.99% min China	Gadolinium oxide 99.99% minimum; iron 0.0001%, silicon 0.002%, calcium 0.0005%, total RE impurities 0.01% maximum	Yn/t	1t	white powder	50kg drums	daily	
Holmium							
Oxide 99.5% min China	Holmium oxide 99.5% minimum; iron 0.001%, silicon 0.0017%, calcium 0.0075%, total RE impurities 0.5% maximum	Yn/t	500kg	powder	50kg drums	daily	
Lanthanum							
Metal 99% min China	Lanthanum 99% minimum; iron 0.3%, carbon 0.05%, silicon 0.05%, calcium 0.02%, RE impurities 1% maximum	Yn/t	5t (+/- 2%)	0.5kg (500g) ingots	50kg drums	weekly	
Metal 99.9% min China	Lanthanum 99.9% minimum; iron 0.1%, carbon 0.03%, silicon 0.03%, calcium 0.01%, RE impurities 0.1% maximum	Yn/t	1t (+/- 2%)	0.5kg (500g) ingots	50kg drums	weekly	
Oxide 99.5-99.9% China	Lanthanum oxide 99.5-99.9% minimum; iron 0.005%, silicon 0.05%, calcium 0.05%, sodium 0.10%, zinc 0.015%, chlorine 0.05%, RE impurities 0.5% maximum	Yn/t	5t (+/- 2%)	white powder	1t bags	twice weekly	
Oxide 99.999% min China	Lanthanum oxide 99.999% minimum; iron 0.0001%, silicon 0.003%, copper 0.0001%, calcium 0.0005%, nickel 0.0001%, other RE oxides 0.001% maximum	Yn/t	5t (+/- 2%)	white powder	1t bags	twice weekly	
Lanthanum cerium chloride min 45% REO ex-works China	Cerium 65%, lanthanum 35% ratio Total Rare Earth Oxide (TREO) 44% minimum	Yn/t	5t (+/- 2%)	white particle or lump	50kg drums	monthly	
Lutetium							
Oxide 99.99% min China	Lutetium 99.99% minimum; iron 0.0001%, silicon 0.001%, calcium 0.0007%, RE impurities 0.01% maximum	Yn/kg	200kg	powder	5kg drum	weekly	
Mischmetal							
La 35% Ce 65% China	Cerium 65%, lanthanum 35% ratio Total Rare Earth Oxide (TREO) minimum; iron 0.2%, silicon 0.03%, carbon 0.03%, zinc 0.01%, magnesium 0.01%, RE impurities 0.1% maximum	Yn/t	5t (+/- 2%)	1-2kg ingots	50kg drums	monthly	
Low Zn and Mg China	Lanthanum 25-35%, cerium 45-55%, praseodymium 4-10%, neodymium 14-18%, total rare earth oxide (TREO) 99.7% minimum; iron 0.2%, zinc 0.001%, magnesium 0.01%, silicon 0.001% maximum	Yn/t	1t (+/- 2%)	ingots	250kg drums	monthly	

Neodymium							
Metal 99% min China	Neodymium 99% minimum; iron 0.2%, silicon 0.03%, calcium 0.03%, magnesium 0.03%, carbon 0.03%, other RE metals 1% maximum	Yn/t	5t (+/- 2%)	1-2kg or 5-7kg ingots	1t bags or 250kg drums	daily	
Oxide 99.5-99.9% China	Neodymium oxide 99.5-99.9% minimum; iron 0.01%, silicon 0.05%, calcium 0.03%, aluminium 0.03%, chlorine 0.03%, other RE oxides 0.5% maximum	Yn/t	5t (+/- 2%)	light blue powder	1t bags	daily	
Praseodymium							
Metal 99% min China	Praseodymium 99% minimum; iron 0.2%, silicon 0.05%, calcium 0.02%, aluminium 0.3%, magnesium 0.02%, oxygen 0.05%, carbon 0.05%, chlorine 0.03%, RE impurities 1% maximum	Yn/t	1t (+/-2%)	irregular lumps of 50mm max	25kg drums	daily	
Oxide 99.5-99.9% China	Praseodymium oxide 99.5-99.9% minimum; iron 0.3%, silicon 0.05%, calcium 0.05%, aluminium 0.05%, magnesium 0.05%, chlorine 0.05%, RE impurities 0.5% maximum	Yn/t	1t (+/- 2%)	black powder	1t bags	daily	
Praseodymium-neodymium							
Metal 99% min China	Neodymium 75% praseodymium 25% ratio, total praseodymium-neodymium oxide 99% minimum; iron 0.3%, silicon 0.05%, calcium 0.03%, aluminium 0.1%, magnesium 0.05%, oxygen 0.05%, carbon 0.05%, chlorine 0.05%, oxygen 0.05%, RE impurities 1% maximum	Yn/t	5t (+/- 2%)	1-2kg or 5-7kg ingots	1t bags or 250kg drums	daily	
Oxide 99% min China	Neodymium 75% praseodymium 25% ratio, total praseodymium-neodymium oxide 99% minimum; iron 0.05%, silicon 0.05%, calcium 0.05%, aluminium 0.05%, magnesium 0.05%, chlorine 0.05%, RE impurities 1% maximum	Yn/t	5t (+/- 2%)	brownish grey powder	1t bags	daily	
Samarium							
Metal 99% min China	Samarium 99% minimum; iron 0.005%, silicon 0.005%, calcium 0.005%, aluminium 0.005%, carbon 0.0072%, magnesium 0.005%, oxygen 0.0066%, total RE impurities 1% maximum	Yn/t	1t (+/-2%)	ingots	50kg drums	twice weekly	
Oxide 99.5% min China	Samarium oxide 99% minimum; iron 0.001%, silicon 0.005%, calcium 0.01%, aluminium 0.02%, total RE impurities 1% maximum	Yn/t	5t (+/- 2%)	faint yellow powder	50kg drums	twice weekly	
Terbium							
Metal 99.9% min China	Terbium 99.9% minimum; iron 0.01%, silicon 0.01%, calcium 0.03%, aluminium 0.01%, magnesium 0.01%, oxygen 0.16%, carbon 0.01%, molybdenum 0.01%, total RE impurities 0.1% maximum	Yn/kg	100kg (+/-2%)	ingots	50kg drums	daily	
Oxide 99.99% min China	Terbium oxide 99.99% minimum; iron 0.005%, silicon 0.02%, calcium 0.01%, total RE impurities 0.01% maximum	Yn/kg	100kg (+/-2%)	brown powder	50kg drums	daily	
Ytterbium							
oxide 99.99% min China	Ytterbium 99.99% minimum; iron 0.001%, silicon 0.003%, calcium 0.005%, total RE impurities 0.01% maximum	Yn/t	500kg	powder	50kg drums	weekly	
Yttrium							
Metal 99.9% min China	Yttrium 99.9% minimum; iron 0.1%, calcium 0.15%, total RE impurities 0.1% maximum	Yn/kg	200kg (+/-2%)	ingots	50kg drums	weekly	
Oxide 99.999% min China	Yttrium oxide 99.999% minimum; iron oxide 0.0001%, silicon oxide 0.001%, calcium oxide 0.0005%, total RE impurities 0.001% maximum	Yn/t	5t (+/- 2%)	white powder	50kg drums	twice weekly	

Rare earth magnet specifications

NdFeB, rough sintered, China domestic ex-works

	Grade	Currency/unit	Minimum lot size	Form	Frequency

Rare earths indexes

Average price indexes

In addition to outright prices, the service provides month-to-date and final-month average indexes.

Indexes are calculated by summing the value of published assessments and dividing by the number of assessments published in a given month. The final index value for a given month is the average calculated on the final day of assessment of that month. The report shows the evolution of the current-month index, as well as the final index value for the previous month.

Timing and indexation

Argus Non-Ferrous Markets contains twice-weekly, weekly and monthly assessments. Those assessments are republished in the Argus Database and available electronically for each publication date. For example, a weekly price assessed on Wednesdays will be republished on Thursday and on each subsequent publication date until the next day of assessment, in this example, the following Wednesday.

Users are advised that the published month-to-date and final indexes may differ from those calculated using Argus or third-party tools, because of this daily republication of price assessments.

Indexes are published for:

Cerium

- metal min 99% fob China
- metal min 99.9% fob China
- oxide 99.5-99.9% fob China

Dysprosium

- metal min 99% fob China
- oxide min 99.5% fob China

Europium

- metal min 99.9% fob China
- oxide min 99.99% fob China

Ferro-dysprosium

- min 80% Dy fob China

Gadolinium

- metal min 99% fob China
- oxide min 99.99% fob China
- oxide min 99.999% fob China

Holmium

- oxide min 99.5% fob China

Lanthanum

- metal min 99% fob China
- metal min 99.9% fob China
- oxide 99.5-99.9% fob China
- oxide min 99.999% fob China

Lutetium

- oxide min 99.99% fob China

Mischmetal

- 35% La 65% Ce fob China

Neodymium

- metal min 99% fob China
- oxide 99.5-99.9% fob China

Praseodymium

- metal min 99% fob China
- oxide 99.5-99.9% fob China

Praseodymium-Neodymium

- metal min 99% fob China
- oxide min 99% fob China

Samarium

- metal min 99% fob China
- oxide min 99.5% fob China

Terbium

- metal min 99.9% fob China
- oxide min 99.99% fob China

Ytterbium

- oxide min 99.99% fob China

Yttrium

- metal min 99.9% fob China
- oxide min 99.999% fob China
