Methodology overview

Methodology rationale

Argus strives to construct methodologies that reflect the way the market trades. Argus aims to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, the specific currencies, volume units, locations and other particulars of an assessment are determined by industry conventions.

In the ferrous scrap, steel feedstocks, stainless steel scrap, ferro-alloys, aluminium, copper, brass, minor metals, zinc, titanium scrap, nickel and super alloys scrap markets, Argus publishes physical market prices in the open market as laid out in the specifications and methodology guide. Argus uses the trading period deemed by Argus to be most appropriate, in consultation with industry, to capture market liquidity.

In order to be included in the assessment process, deals must meet the minimum volume, delivery, timing and specification requirements in our methodology. In illiquid markets, and in other cases where deemed appropriate, Argus assesses the range within which product could have traded by applying a strict process outlined later in this methodology.

Survey process

Argus price assessments are informed by information received from a wide cross section of market participants, including producers, consumers and intermediaries. Argus reporters engage with the industry by proactively polling participants for market data. Argus will contact and accept market data from all credible market sources including front and back office of market participants and brokers. Argus will also receive market data from electronic trading platforms and directly from the back offices of market participants. Argus will accept market data by telephone, instant messenger, email or other means.

Argus encourages all sources of market data to submit all market data to which they are a party that falls within the Argus stated methodological criteria for the relevant assessment. Argus encourages all sources of market data to submit transaction data from back office functions.

Throughout all markets, Argus is constantly seeking to increase the number of companies willing to provide market data. Reporters are mentored and held accountable for expanding their pool of contacts. The number of entities providing market data can vary significantly from day to day based on market conditions.

For certain price assessments identified by local management, if more than 50pc of the market data involved in arriving at a price assessment is sourced from a single party the supervising editor will engage in an analysis of the market data with the primary reporter to ensure that the quality and integrity of the assessment has not been affected.

Market data usage

In each market, Argus uses the methodological approach deemed to be the most reliable and representative for that market. Argus will utilise various types of market data in its methodologies, to include:

- Transactions
- Bids and offers
- Other market information, to include spread values between grades, locations, timings, and many other data.

In many markets, the relevant methodology will assign a relatively higher importance to transactions over bids and offers, and a relatively higher importance to bids and offers over other market information. Certain markets however will exist for which such a hierarchy would produce unreliable and non-representative price assessments, and so the methodology must assign a different relative importance in order to ensure the quality and integrity of the price assessment. And even in markets for which the hierarchy normally applies, certain market situations will at times emerge for which the strict hierarchy would produce non-representative prices, requiring Argus to adapt in order to publish representative prices.

Verification of transaction data

Reporters carefully analyse all data submitted to the price assessment process. These data include transactions, bids, offers, volumes, counterparties, specifications and any other information that contributes materially to the determination of price. This high level of care described applies regardless of the methodology employed. Specific to transactions, bids, and offers, reporters seek to verify the price, the volume, the specifications, location basis, and counterparty. In some transactional average methodologies, reporters also examine the full array of transactions to match counterparties and arrive at a list of unique transactions. In some transactional average methodologies, full details of the transactions verified are published electronically and are accessible by subscribers. The deals are also published in the daily report.

Several tests are applied by reporters in all markets to transactional data to determine if it should be subjected to further scrutiny. If a transaction has been identified as failing such a test, it will receive further scrutiny. For assessments used to settle derivatives and for many other assessments, Argus has established internal procedures that involve escalation of inquiry within the source's company and escalating review within Argus management. Should this process determine that a transaction should be excluded from the price assessment process, the supervising editor will initiate approval and, if necessary, documentation procedures.

Primary tests applied by reporters

- Transactions not transacted at arms length, including deals between related parties or affiliates.
- Transaction prices that deviate significantly from the mean of all transactions submitted for that day.
- Transaction prices that fall outside of the generally observed lows and highs that operated throughout the trading day.
- Transactions that are suspected to be a leg of another

transaction or in some way contingent on an unknown transaction.

- Single deal volumes that significantly exceed the typical transaction volume for that market.
- Transaction details that are identified by other market participants as being for any reason potentially anomalous and perceived by Argus to be as such.
- Transaction details that are reported by one counterparty differently than the other counterparty.
- Any transaction details that appear to the reporter to be illogical or to stray from the norms of trading behaviour. This could include but is not limited to divergent specifications, unusual delivery location and counterparties not typically seen.
- Transactions that involve the same counterparties, the same price and delivery dates are checked to see that they are separate deals and not one deal duplicated in Argus records.

Secondary tests applied by editors for transactions identified for further scrutiny

Transaction tests

- The impact of linkage of the deal to possible other transactions such as contingent legs, exchanges, options, swaps, or other derivative instruments. This will include a review of transactions in markets that the reporter may not be covering.
- The nature of disagreement between counterparties on transactional details.
- The possibility that a deal is directly linked to an offsetting transaction that is not publicly known, for example a "wash trade" which has the purpose of influencing the published price.
- The impact of non-market factors on price or volume, including distressed delivery, credit issues, scheduling issues, demurrage, or containment.

Source tests

- The credibility of the explanation provided for the outlying nature of the transaction.
- The track record of the source. Sources will be deemed more credible if they
 - Regularly provide transaction data with few errors.
 - Provide data by Argus' established deadline.
 - Quickly respond to queries from Argus reporters.
 - Have staff designated to respond to such queries.
- How close the information receipt is to the deadline for information, and the impact of that proximity on the validation process.

Assessment guidelines

When insufficient, inadequate, or no transaction information exists, or when Argus concludes that a transaction based methodology will not produce representative prices, Argus reporters will make an assessment of market value by applying intelligent judgment based on a broad array of factual market information. Reporters must use a high degree of care in gathering and validating all market data used in determining price assessments, a degree of care equal to that applying to gathering and validating transactions. The informa-

tion used to form an assessment could include deals done, bids, offers, tenders, spread trades, exchange trades, fundamental supply and demand information and other inputs.

The assessment process employing judgment is rigorous, replicable, and uses widely accepted valuation metrics. These valuation metrics mirror the process used by physical commodity traders to internally assess value prior to entering the market with a bid or offer. Applying these valuation metrics along with sound judgment significantly narrows the band within which a commodity can be assessed, and greatly increases the accuracy and consistency of the price series. The application of judgment is conducted jointly with the supervising editor, in order to be sure that guidelines below are being followed. Valuation metrics include the following:

Relative value transactions

Frequently transactions occur which instead of being an outright purchase or sale of a single commodity, are instead exchanges of commodities. Such transactions allow reporters to value less liquid markets against more liquid ones and establish a strong basis for the exercise of judgment.

- Exchange one commodity for a different commodity in the same market at a negotiated value.
- Exchange delivery dates for the same commodity at a negotiated value.
- Exchange a commodity in one location for the same commodity at another location at a negotiated value.

Bids and offers

If a sufficient number of bids and offers populate the market, then in most cases the highest bid and the lowest offer can be assumed to define the boundaries between which a deal could be transacted.

Comparative metrics

- The relative values between compared commodities are readily discussed in the market and can be discovered through dialogue with market participants. These discussions are the precursor to negotiation and conclusion of transactions.
- Comparison to the same commodity in another market centre.
- Comparison to a more actively traded but slightly different specification commodity in the same market centre.
- Comparison to the same commodity traded for a different delivery timing.
- Comparison to the commodity's primary feedstock or primary derived product(s).
- Comparison to trade in the same commodity but in a different modality (as in barge versus oceangoing vessel) or in a different total volume (as in full cargo load versus partial cargo load).

Volume minimums and transaction data thresholds

Argus typically does not establish thresholds strictly on the basis of a count of transactions, as this could lead to unreliable and non-representative assessments and because of the varying transportation infrastructure found in all commodity markets. Instead, minimum volumes are typically established which may

apply to each transaction accepted, to the aggregate of transactions, to transactions which set a low or high assessment or to other volumetrically relevant parameters.

For price assessments used to settle derivatives, Argus will seek to establish minimum transaction data thresholds and when no such threshold can be established Argus will explain the reasons. These thresholds will often reflect the minimum volumes necessary to produce a transaction-based methodology, but may also establish minimum deal parameters for use by a methodology that is based primarily on judgment.

Should no transaction threshold exist, or should submitted data fall below this methodology's stated transaction data threshold for any reason, Argus will follow the procedures outlined elsewhere in this document regarding the exercise of judgment in the price assessment process.

Transparency

Argus values transparency in energy markets. As a result, where available, we publish lists of deals in our reports that include price, basis, counterparty and volume information. The deal tables allow subscribers to cross check and verify the deals against the prices. Argus feels transparency and openness is vital to developing confidence in the price assessment process.

Swaps and forwards markets

Argus publishes forward assessments for numerous markets. These include forward market contracts that can allow physical delivery and swaps contracts that swap a fixed price for the average of a floating published price. Argus looks at forward swaps to inform physical assessments but places primary emphasis on the physical markets.

Publications and price data

Argus ferrous scrap, steel feedstocks, stainless steel scrap, ferro-alloys, aluminium, copper, brass, minor metals, zinc, titanium scrap, nickel and super alloys scrap prices are published in the Argus Scrap Markets report. Subsets of these prices appear in other Argus market reports and newsletters in various forms. The price data are available independent of the text-based report in electronic files that can feed into various databases. These price data are also supplied through various third-party data integrators. The Argus website also provides access to prices, reports and news with various web-based tools. All Argus prices are kept in a historical database and available for purchase. Contact your local Argus office for information.

A publication schedule is available at www.argusmedia.com

Corrections to assessments

Argus will on occasion publish corrections to price assessments after the publication date. We will correct errors that arise from clerical mistakes, calculation errors, or a misapplication of our stated methodology. Argus will not retroactively assess markets based on new information learned after the assessments are published. We make our best effort to assess markets based on the information we gather during the trading day assessed.

Ethics and compliance

Argus operates according to the best practices in the publishing field, and maintains thorough compliance procedures throughout the firm. We want to be seen as a preferred provider by our sub-scribers, who are held to equally high standards, while at the same time maintaining our editorial integrity and independence. Argus has a strict ethics policy that applies to all staff. The policy can be found on our website at www.argusmedia.com. Included in this policy are restrictions against staff trading in any energy commodity or energy related stocks, and guidelines for accepting gifts. Argus also has strict policies regarding central archiving of email and instant messenger communication, maintenance and archiving of notes, and archiving of spreadsheets and deal lists used in the price assessment process. Argus publishes prices that report and reflect prevailing levels for open-market arms length transactions (please see the [Argus Global Compliance Policy](#) for a detailed definition of arms length).

Consistency in the assessment process

Argus recognises the need to have judgment consistently applied by reporters covering separate markets, and by reporters replacing existing reporters in the assessment process. In order to ensure this consistency, Argus has developed a programme of training and oversight of reporters. This programme includes:

- A global price reporting manual describing among other things the guidelines for the exercise of judgment
- Cross-training of staff between markets to ensure proper holiday and sick leave backup. Editors that float between markets to monitor staff application of best practices
- Experienced editors overseeing reporting teams are involved in daily mentoring and assisting in the application of judgment for illiquid markets
- Editors are required to sign-off on all price assessments each day, thus ensuring the consistent application of judgment.

Review of methodology

The overriding objective of any methodology is to produce price assessments which are reliable and representative indicators of commodity market values and are free from distortion. As a result, Argus editors and reporters are regularly examining our methodologies and are in regular dialogue with the industry in order to ensure that the methodologies are representative of the market being assessed. This process is integral with reporting on a given market. In addition to this ongoing review of methodology, Argus conducts reviews of all of its methodologies and methodology documents on at least an annual basis.

Argus market report editors and management will periodically and as merited initiate reviews of market coverage based on a qualitative analysis that includes measurements of liquidity, visibility of market data, consistency of market data, quality of market data and industry usage of the assessments. Report editors will review:

- Appropriateness of the methodology of existing assessments
- Termination of existing assessments
- Initiation of new assessments.

The report editor will initiate an informal process to examine viability. This process includes:

- Informal discussions with market participants
- Informal discussions with other stakeholders
- Internal review of market data

Should changes, terminations, or initiations be merited, the report editor will submit an internal proposal to management for review and approval. Should changes or terminations of existing assessments be approved, then formal procedures for external consultation are begun.

Changes to methodology

Formal proposals to change methodologies typically emerge out of the ongoing process of internal and external review of the methodologies. Formal procedures for external consultation regarding material changes to existing methodologies will be initiated with an announcement of the proposed change published in the relevant Argus report. This announcement will include:

- Details on the proposed change and the rationale
- Method for submitting comments with a deadline for submissions
- For prices used in derivatives, notice that all formal comments will be published after the given consultation period unless submitter requests confidentiality.

Argus will provide sufficient opportunity for stakeholders to analyse and comment on changes, but will not allow the time needed to follow these procedures to create a situation wherein unrepresentative or false prices are published, markets are disrupted, or market participants are put at unnecessary risk. Argus will engage with industry throughout this process in order to gain acceptance of proposed changes to methodology. Argus cannot however guarantee universal acceptance and will act for the good order of the market and ensure the continued integrity of its price assessments as an overriding objective.

Following the consultation period, Argus management will commence an internal review and decide on the methodology change. This will be followed by an announcement of the decision, which will be published in the relevant Argus report and include a date for implementation. For prices used in derivatives, publication of stakeholders' formal comments that are not subject to confidentiality and Argus' response to those comments will also take place.

The report

Argus publishes metal prices that report and reflect prevailing levels for open-market arms length transactions.

Various methodological approaches are employed in reporting metals markets to produce the most representative price assessments.

These include volume-weighted averages of deals done, lows and highs of deals done, and other methods.

In illiquid markets, Argus assesses the range within which metals could have traded, based on bids and offers, movements of similar or related grades, and extensive polling of market participants.

Formula-priced deals, market fundamentals and information regarding trade in material that does not meet specifications also inform assessments, but a primary emphasis is placed on the physical markets.

To be included in the price formation process, deals must meet the strict delivery, timing and specification requirements in the methodology, and must be executed at arms length between a willing buyer and seller.

Market information received after the timestamp or cut-off time established for a given assessment may not be considered for inclusion in the assessment process for that day but may be considered for inclusion in the next assessment.

In markets where liquidity is split across several locations, information may be normalised to a single reference hub, for example by making adjustments for transportation costs, where appropriate and in line with market practice.

Publication schedule

Prices follow regional holiday schedules. Should a holiday fall on the day a price would normally be assessed, the assessment will be made and published on the next Argus publication date. Note, minor metal and ferro-alloy prices republished from Argus Non-Ferrous Markets publish on the day before US public holidays, see the [Argus Non-Ferrous Markets methodology](#).

A publication schedule is available at www.argusmedia.com

Survey method and verification

Price assessments rely on a wide variety of sources for information, including refiners, marketers, importers, traders and brokers.

Argus does not restrict itself to one subsection of the market, such as a single trading platform or a single informational channel, for the market information collected. Market surveys are intended to be balanced in approach and are conducted by experienced industry specialists.

In most cases, information relating to material that falls outside of the stated specifications will not be used in the assessment process. Exceptions may be made if an acceptable and appropriate normalisation process can be applied.

In markets where liquidity is split across several locations, verified spot trades may be normalised to a single reference hub, for example by making adjustments for transportation costs, where appropriate and in line with market practice.

Truckloads

Argus assesses full truckloads — market activity for partial or mixed truckloads is excluded from assessments.

US monthly ferrous scrap supplement

Argus publishes a monthly supplement focused on the US ferrous scrap market once the monthly ferrous trade has concluded and prices have been assessed. All prices included are republished from Argus Scrap Markets.

Argus US Ferrous Scrap includes:

- Delivered US consumer
- US dealer selling prices
- Delivered Canada consumer
- Delivered US foundry, speciality consumer

And monthly snapshot prices for

- HRC ex-works US midwest
- Plate delivered US
- Basic pig iron cfr New Orleans
- HMS 1/2 80:20 cfr Turkey

Aluminium

Introduction

Argus Scrap Markets publishes price assessments and market commentary on aluminium markets.

Basis of assessment

Assessments are for the named material delivered by truck, meeting the quantity and timing criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Timing of assessment

Prices are assessed and published daily, weekly or quarterly on the day specified in the table below.

US markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

European markets

Market information received after 5pm London time on the day of assessment may not be included in the assessment process.

Asia-Pacific markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Rounding

Assessments are published to up to four decimal places, ending in 0 or 5.

Currency and unit

Prices are assessed and published in the currencies and units specified below.

Premiums

Argus Scrap Markets includes weekly and monthly aluminium prices republished from Argus Non-Ferrous Markets.

Weekly

- P1020 US midwest spot
- P1020 US midwest spot monthly average
- P1020 US midwest transaction

See the [Argus Non-Ferrous Markets methodology](#).

A356.2

The Argus assessment of A356.2 prices is calculated daily as the sum of the daily LME aluminium cash settlement, the weekly Argus US midwest P1020 spot premium and a monthly assessment of the A356.2 alloy surcharge based on discussion with market participants. The monthly surcharge is assessed on the 15th of each calendar month or the next publication day if the 15th is a weekend or holiday.

Aluminium specifications							
Assessment	Quality	Transacted/ transactable	Day of assessment	Min lot size	Timing	Currency/ unit	Delivery
Aluminium mill, extruder scrap delivered US							
10/10 extrusions	ReMa Toto	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
1100 & 3003	ReMa Tooth; Aluminum Association 1100 and 3003	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
5052 clips	ReMa Tooth; Aluminum Association 5052	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
6061 new, bare	Aluminum Association 6061, new bare extrusion scrap	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
6063 new, bare	ReMa Tata; Aluminum Association 6063; new bare extrusion	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Cans (UBC)	ReMa Taldon; used aluminium beverage cans	on day of assessment	daily	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
EC wire	ReMa Talon; Electrical Conductor wire	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Litho sheet	ReMa Tabloid	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
MLC	ReMa Taboo; mixed low copper aluminium alloy clips and/or solids for processing in mill	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Old sheet	ReMa Taint/tabor, max. 2% iron content	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Painted siding	ReMa Tale for processing in mill	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
5754 baled clips	ReMa Tooth, Aluminum Association 5754 baled clips	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky, Tennessee or New York
5182 baled clips	ReMa Tooth, Aluminum Association 5182 bare baled clips	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky, Tennessee or New York
6022 baled clips	ReMa Tooth, Aluminum Association 6022 baled clips	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky, Tennessee or New York
6016 baled clips	ReMa Tooth, Aluminum Association 6016 baled clips	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky, Tennessee or New York
6111 baled clips	ReMa Tooth, Aluminum Association 6111 baled clips	on day of assessment	Tuesday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky, Tennessee or New York

Assessment	Quality	Transacted/ transactable	Day of assessment	Min lot size	Timing	Currency/ unit	Delivery
Aluminium secondary smelter scrap, delivered US							
A356 wheels	ReMa Troma; Aluminum Association A356; alloy wheels	on day of assessment	Thursday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Aluminium-copper radiators	ReMa Talk	since last assessment	Thursday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Clean, old aluminium radiators	ReMa Tally	since last assessment	Thursday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
High grade turnings	ReMa Telic; zinc max. 1.5%	since last assessment	Thursday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Irony 6063 extrusions	Post-consumer 6063 extrusions with irony attachments such as steel hinges	since last assessment	Thursday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Mixed 2000/7000 solids	ReMa:Tough; Aluminum Association 2000 series, 7000 series	since last assessment	Thursday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
Mixed 2000/7000 turnings	ReMa:Tough; Aluminum Association 2000 series, 7000 series	since last assessment	Thursday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee
MLC secondary	ReMa Taboo; mixed low copper aluminium alloy clips and/or solids for processing in secondary smelter	since last assessment	Thursday	truckload	30 days	\$/lb	by truck to Indiana, Missouri, Wisconsin, Kentucky or Tennessee

Copper and brass

Introduction

Argus Scrap Markets publishes price assessments and market commentary on the copper and brass markets.

Basis of assessment

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Notes

- Brass alloy copper next active month spread: the price of the copper component only, expressed as a differential to the Comex next active month settlement (the nearest base contract month following the current delivery month).
- Brass alloy copper cash spread: the price of the copper component only, expressed as a differential to the Comex current month (spot) settlement.
- Brass alloy zinc cash spread: the price of the zinc component only, expressed as a differential to the LME official current month (spot) settlement.
- Next active month spreads for #1 wire and tube, #2 Birch/Cliff, and bare bright delivered US are assessed as a differential to the Comex next active month settlement (the nearest base contract month following the current delivery month).
- Cash spreads for #1 wire and tube, #2 Birch/Cliff, and bare bright delivered US are assessed as the addition of the Next Active month spread and the differential of the Comex Next active month to the Comex current month (spot) settlement.
- Transaction prices for #1 wire and tube, #2 Birch/Cliff, and bare bright delivered US are assessed as the addition of the respective Cash copper spreads with the Comex current month (spot) settlement.
- Spreads for #1 wire and tube, #2, and Bare bright del Europe are assessed as a percentage of the LME copper cash settlement.
- Spreads for #1 wire and tube, #2, and Bare bright cif China are assessed as a percentage of the LME copper three-month settlement.
- Brass alloy scrap transaction prices: calculated using the relevant exchange prices for copper and zinc with Argus assessments for copper and zinc spreads in brass scrap applied to each metal's future price and combined in the proportion of the alloy: (% copper * (Comex Copper spot settlement + the Argus C200-series copper cash spread assessment)) + (% zinc * (LME Zinc cash price + the Argus C200-series zinc cash spread))

Timing of assessment

Prices are assessed and published weekly on the day specified in the table below.

US markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

European markets

Market information received after 5pm London time on the day of assessment may not be included in the assessment process.

Asia-Pacific markets

Market information received after 4pm Houston time on the day of the assessment may not be included in the assessment process.

Rounding

Assessments are published to up to four decimal places, ending in 0 or 5.

Copper cathode premiums

Argus Scrap Markets includes weekly copper cathode premiums republished from Argus Non-Ferrous Markets.

- Grade A del US midwest
- Grade A del US midwest transaction

See the [Argus Non-Ferrous Markets methodology](#).

Nickel

Argus Scrap Markets includes weekly and monthly nickel price assessments republished from Argus Non-Ferrous Markets.

Nickel premiums

- 1x1 inch (small lots) del US (monthly)
- 1x1 inch (truckloads) del US (monthly)
- 4x4 inch (small lots) del US
- 4x4 inch (truckloads) del US
- Briquettes del US
- Nickel 200 scrap

Nickel transaction prices

- 4x4 inch (truckloads) del US transaction

Copper chops (noodles)

Introduction

Argus Scrap Markets publishes price assessments and market commentary on the US copper markets.

Basis of assessment

Assessments are of delivered consumer prices for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment

Note

- Copper chops cash spreads are assessed as a differential to the Comex current month (spot) copper settlement
- Copper chops next active month spreads are assessed as a differential to the Comex next active month settlement (the nearest base contract month following the current delivery month)

Timing of assessment

Assessments for copper wire noodles del US consumer (bare bright, #1 clove and #2 cobra) are assessed and published weekly, on Wednesday. Assessments for copper wire noodles fas US port (bare bright, #1 clove and #2 cobra) are assessed and published weekly, on Thursday.

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Rounding

Assessments are published to up to four decimal places, ending in 0 or 5.

Zinc and lead

Introduction

Argus Scrap Markets publishes price assessments and market commentary on the zinc and lead markets.

Basis of assessment

Assessments are of delivered consumer prices for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Timing of assessment

Special high grade zinc ingot, scrap and ingot prices are assessed and published weekly, on Monday. Lead ingot and scrap prices are assessed and published weekly, on Tuesday. Zinc dross prices are assessed quarterly on the first business day of the named quarter.

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Rounding

Assessments are published to up to four decimal places, ending in 0 or 5.

Special high grade zinc, lead ingot

Argus Scrap Markets includes weekly Special high grade zinc and lead ingot price assessments republished from Argus Non-Ferrous Markets.

- Special high grade del US premium 99.995%
- Special high grade del US transaction
- Special high grade in-warehouse Rotterdam premium
- Lead ingot primary 99.97% premium del US
- Lead ingot primary 99.97% del US transaction

See the [Argus Non-Ferrous Markets methodology](#).

US scrapyard collection prices

Introduction

Argus Scrap Markets publishes price assessments on the North American ferrous and non-ferrous markets at the collection level, assessing prices at which scrap yards and processors purchase material from the public and peddlers.

Basis of assessment

Assessments are the purchasing prices for the named material in each of the seven regions specified below. Assessments are of the most repeatable price, taking into account buying prices collected from publicly-posted price lists and official buying prices collected directly from buy-side sources.

Timing of assessments

Prices are assessed fortnightly, on Friday, and reflect the market for the previous two weeks ending on the publication day.

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Regions

Each specification is assessed in each the following regions, except aluminium scrap cans (UBC) which is assessed in every region but Quebec.

US regions

Northeast: New York, Massachusetts, Connecticut, Rhode Island, New Jersey, Maryland, Washington DC, Delaware, eastern Pennsylvania, Maine

Ohio Valley: Ohio, West Virginia, Kentucky, western Pennsylvania

Midwest: Indiana, Illinois, Michigan, Minnesota, Wisconsin, Iowa, Missouri

Southeast: Tennessee, Mississippi, Alabama, Louisiana, Georgia, North Carolina, South Carolina, Florida

Texas

Canadian regions

Ontario

Quebec

* All non-ferrous assessments in \$/lb except for material in Quebec and Ontario, which are in C\$/lb. All ferrous assessments are in \$/gt except for Quebec and Ontario, which are in C\$/nt.

Global ferrous scrap — daily and weekly

Introduction

Argus Scrap Markets publishes daily and weekly price assessments, market commentary and shipping costs on the international and domestic Russian spot markets for ferrous scrap.

Basis of assessment

Assessments cover the most traded grades of ferrous scrap. Argus does not exclusively rely upon transactions to establish market prices.

Information on transactions, bids and offers that lie outside the specifications of timing, size and quality will be taken into account but information that lies within the specifications of the assessment will be given the most weight. Argus applies editorial judgment to the surveys and will eliminate information that is not judged to be representative of the market in its final assessment of the price.

These specifications standardise the assessment around key criteria relating to cargo size and location.

Timing of assessment

Assessments are the average of the trading day's or week's activity. Transactions completed after the timestamp listed in the table below will not be considered for inclusion in the assessment.

HMS 1/2 (80:20) containerised cfr Taiwan

The price is typically assessed as a volume-weighted average of reported trade meeting the specifications below.

- If the total of validated trade meets or exceeds 3,000t and three trades, the price is assessed as the volume-weighted average of trade
- In the absence of sufficient trade, Argus will consider for inclusion in the assessment firm bids, offers and other information in the market as well as making reference to, or "rolling over", the last known traded values, as expressed in the previous day's published price assessment, to limit undue volatility in the published assessment
- In the absence of new market information or if new market information does not indicate a significant shift from the previous day's prices, Argus may report the price as unchanged
- The assessment is rounded to the nearest 25¢/t

Differentials to HMS1/2 (80:20) cfr Turkey

Argus also publishes scrap grade differentials to the HMS 1/2 (80:20) cfr Turkey price assessment.

Differentials are published for

- HMS 1/2 (75:25)
- HMS 1/2 (85:15)
- HMS 1/2 (90:10)
- Shredded
- P&S
- Bonus
- Bundles
- Bushelling
- #1 HMS
- New cutting

Tokyo Steel posted prices

Prices are as posted by Tokyo Steel in yen/tonne and are converted to US dollars per tonne at the exchange rate on the day of publication. Posted prices are updated as of 5pm Singapore time on the day of publication.

Ferrous scrap H2 fob Japan

The price is typically assessed as a volume-weighted average of reported trade meeting the specifications below.

If the total of validated trade meets or exceeds 2,500t, the price is assessed as a volume-weighted average of trade. In the absence of sufficient trade, Argus will consider for inclusion in the assessment trade, bids, offers and other information in the market.

Trade on a delivered South Korea, Taiwan or Vietnam basis will be considered for inclusion in the assessment after adjusting the price to a fob Japan basis using a freight cost assessed in discussion with market participants. Trade in H1 and H1/H2 grades will be normalised to the H2 specification for consideration for inclusion in the assessment.

The price is assessed in Yen/t. The final price is also converted to \$/t for publication using the latest exchange rate available at the time of publication. Trade done on a \$/t basis is converted to Yen/t for inclusion in the assessment using the latest available exchange rate for the day of trade. Published prices are rounded to the nearest dollar or the nearest 100 yen.

Prices are assessed and published daily.

Ferrous scrap HS fob Japan

The price is typically assessed as a volume-weighted average of reported trade meeting the specifications below.

If the total of validated trade meets or exceeds 2,500t, the price is assessed as a volume-weighted average of trade. In the absence of sufficient trade, Argus will consider for inclusion in the assessment trade, bids, offers and other information in the market.

Trade on a delivered China, Vietnam, South Korea or Taiwan basis will be considered for inclusion in the assessment after adjusting the price to a fob Japan basis using a freight cost assessed in discussion with market participants. Trade in Shindachi grades will be normalised to the HS specification for consideration for inclusion in the assessment.

The price is assessed in Yen/t. The final price is also converted to \$/t for publication using the latest exchange rate available at the time of publication. Trade done on a \$/t basis is converted to Yen/t for inclusion in the assessment using the latest available exchange rate for the day of trade. Published prices are rounded to the nearest dollar or the nearest 100 yen.

Prices are assessed and published weekly on Friday.

†Delivered price as posted by Shagang mill

Deep-sea Supramax freight

Argus publishes calculated freight rates for Supramax-sized ferrous scrap bulk cargoes on specified routes, based on time-charter equivalent rates, bunker fuel costs and Argus assessments of other costs involved with the voyage.

The time-charter rates used in the voyage rate calculations are the \$/day cost of hiring a standard vessel for the voyage duration. The time-charter rates exclude bunker costs, port fees, canal tolls, and other voyage-related fees. Argus assesses time-charter rates each Friday on or the following publication day if Friday is a holiday.

In addition to those specified below, Argus also assumes standard sea margins, broker commissions, bunkering charges per bunkering port visit, time spent in port for loading, unloading and bunkering, and other costs.

Review of assumptions

All assumptions are under continual review and are updated at least once a year.

Calculation

All \$/t freight rates are calculated using the same generalised formula: Voyage rate (\$/t) = (TCE (\$/day) x Voyage duration (day) + Costs (\$))/Cargo Size (t)

Routes

- New York-Iskenderun 40kt Supramax
- Houston-Iskenderun 40kt Supramax
- Rotterdam-Iskenderun 40kt Supramax
- Los Angeles-Incheon 40kt Supramax

Routing

Voyages are assumed to be one way. All routes assume avoidance of the Suez and Panama canals. No canal costs are included in the calculation of time-charter equivalent rates.

Vessel assumptions

Calculations are based on the standard "Tess 58" type vessel, not fitted with a scrubber, with the following characteristics:

- 58,328mt dwt
- maximum age 15yr

Fuel

All vessels are assumed to burn 0.5pc sulphur fuel oil. While in the US and European sulphur emissions control areas (SECAs) and in ports in those regions, all vessels are assumed to consume 0.1pc MGO. Vessels are assumed to consume 0.5pc sulphur fuel oil in all other ports

- laden fuel consumption of 33t/d of fuel oil at 14 knots
- ballast fuel consumption of 32t/d of fuel oil at 14 knots

Fuel prices are the latest Argus assessments at the named fuelling location (Rotterdam, Houston, New York or Los Angeles) available at the time of publication. See the [Argus Marine Fuels methodology](#) for more information about Argus bunker fuel price assessments.

Cargo size

Calculations assume cargo size to be the maximum possible given draught restriction, cargo-specific and other factors as determined in regular communication with the market.

Broker commission on negative TCE rates

No TCE broker commission is added when the TCE is less than zero. TCE rates can fall below zero if shipowners' costs are larger than the lumpsum for the voyage.

Port assumptions

Deep-sea Supramax port assumptions

Loading port	Cost	Load rate (t/day)	Turn time (hours)
Rotterdam	\$61,000	6,000	12
New York	\$90,000	6,000	12
Houston	\$93,000	6,000	12
Los Angeles	\$55,000	6,000	12
Receiving port	Cost	Unload rate (t/day)	Turn time (hours)
Iskenderun	\$31,000	6,000	12
Incheon	\$42,000	6,000	12

Short-sea and containerised freight

Introduction

Argus Scrap Markets publishes short-sea bulk and containerised ferrous scrap freight rates.

Basis of assessment

Assessments are for transportation meeting the lot size, modality, load and discharge port listed. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Timing of assessment

Bulk freight prices are assessed weekly, on Friday. Containerised scrap freight prices are assessed monthly, on the last working day of the month. Except for the bulk Japan-eastern China rate, market information received after 4pm London time on the day of assessment may not be included in the assessment process. Information received after 5pm Singapore time on the day of assessment may not be included in the bulk Japan-eastern China assessment process.

Rounding

Ferrous scrap freight rates are rounded to two decimal places, ending in 0 or 5.

Ferrous scrap freight specifications

Assessment	Modality	Quantity	Load port	Discharge port
Bulk export New York-Turkey*	Bulk	Supramax	New York	Turkey
Bulk export Houston-Turkey*	Bulk	Supramax	Houston	Turkey
Bulk export ARA-Turkey*	Bulk	Supramax	ARA†	Turkey
Bulk export Los Angeles-South Korea	Bulk	Supramax	Los Angeles	South Korea all
Bulk export Japan-eastern China	Bulk	3,000-5,000t	Japan	Eastern China
Containerised export New York-Mumbai	Container	22-27t	New York	Mumbai
Containerised export Los Angeles-Taiwan	Container	22-27t	Los Angeles	Taiwan all
Containerised export San Francisco-Taiwan	Container	22-27t	San Francisco	Taiwan all
Containerised export Seattle-Taiwan	Container	22-27t	Seattle	Taiwan all

*Note: includes all Turkish ports except Samsun

†Note: ARA is Amsterdam, Rotterdam, Antwerp

European domestic ferrous scrap — monthly

Argus Scrap Markets publishes monthly price assessments and market commentary on European domestic ferrous scrap markets.

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are published as a range around an assessed fair-value price at which the bulk of monthly spot business settled, or could have settled in the absence of new assessment-relevant information.

Timing of assessment

European domestic ferrous scrap prices are assessed and published on or before the 20th day of the calendar month, depending on when the majority of trade for a given grade in a given location is completed.

Market information received after 4.30pm London time on the day of assessment may not be included in the assessment process.

US and Canadian ferrous scrap — monthly

Introduction

Argus Scrap Markets publishes monthly price assessments and market commentary on the US and Canadian ferrous scrap markets.

Basis of assessment

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are published as a single price at which repeatable trade took place or at which it could have taken place in the absence of transactions since the last assessment.

US national average prices

US national average prices are the arithmetic average of published price assessments for each product in the regions outlined below. Averages may include regional prices for more than one calendar month, depending on whether each location has concluded trade for the month at the time of publication.

Southern US ferrous scrap weighted-averages

Monthly averages of the Birmingham, Carolinas and northeast Arkansas monthly ferrous scrap assessments weighted by each region's estimated average scrap consumption based on steelmaking capacity.

Prices are calculated and published in \$/gt once all monthly assessments are completed.

Prices are calculated for

- #1 busheling
- Shredded

Timing of assessment

US prices are assessed and published on or before the 10th working day of the calendar month, depending on when the majority of trade for a given location is completed. Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Canadian and US foundry, specialty consumer grades are assessed and published on or before the 15th day of the calendar month, depending on when the majority of trade for a given location is completed.

US ferrous scrap — weekly

Introduction

Argus Scrap Markets publishes weekly price assessments and market commentary on the US ferrous scrap markets.

Basis of assessment

Assessments are for the named material meeting the lot size, timing

and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Timing of assessment

Prices are assessed and published weekly, on the day specified below. Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Ferrous scrap specifications

Assessment	Minimum quantity	Timing	Currency/unit
Regional ferrous scrap - Friday			
US eastern (del Philadelphia, Pittsburgh, Cleveland/Youngstown)			
#1 HMS	500gt	30 days	\$/gt
Shredded	500gt	30 days	\$/gt

Shredded	Birmingham, Chicago, Cleveland, Detroit, Pittsburgh		
#1 busheling	Birmingham, Chicago, Cleveland, Detroit		
P&S, 5ft	Birmingham, Chicago, Philadelphia, Pittsburgh		

Mexico ferrous scrap

Introduction

Argus Scrap Markets publishes weekly ferrous scrap price assessments for Mexico.

Basis of assessment

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are published as a low/high range in which repeatable trade took place or could have taken place in the absence of transactions since the last assessment.

Prices are assessed in Mexican peso/t. The final price is also converted to \$/t for publication using the latest exchange rate available at the time of publication.

Timing of assessment

Mexico ferrous scrap prices are assessed weekly on Friday. Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Mexico ferrous scrap specifications

Assessment	Minimum quantity	Timing	Currency/unit
delivered Monterrey/Saltito mill			
#1 busheling	500t	prompt	PS/t, \$/t
Mixto (mixed HMS)	500t	prompt	PS/t, \$/t
Pesado (HMS)	500t	prompt	PS/t, \$/t

Steel feedstocks

Introduction

Argus Steelmaking Raw Materials publishes weekly price assessments on the international steel feedstocks markets

fob Black Sea

Assessment are the average of the trading week's activity. Transactions completed after the time stamp for physical transactions (5.30pm London time on Thursday) will not be considered for inclusion in the assessment.

China domestic

Assessment are the average of the trading week's activity. Transactions completed after the time stamp for physical transactions (5.30pm Singapore time on Friday) will not be considered for inclusion in the assessment.

Americas

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Prices are assessed and published weekly, on Thursday. Market information received after noon London time on the day of assessment may not be included in the assessment process.

Stainless steel

Introduction

Argus Scrap Markets publishes daily, weekly and monthly price assessments and market commentary on the US and international stainless steel scrap, flat rolled, cold rolled and bar markets.

Basis of assessment

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Flat rolled coil, cold rolled sheet and bar raw material surcharges are the arithmetic average of surcharges announced by US or European producers. US flat rolled coil and bar assessments are calculated by adding the raw material surcharge averages to assessed base prices. European delivered cold rolled sheet and ex-warehouse China cold rolled coil transaction prices are assessed independently.

Stainless steel scrap nickel contained in 304/316 scrap solids spread del US consumer is expressed as a percentage of the LME official nickel cash price.

The 304 (18-8) solids cif Rotterdam and 316 solids cif Rotterdam prices are assessed in €/t and converted to \$/lb for publication.

Timing

Weekly price assessments are published each Tuesday or Thursday as detailed below.

Monthly stainless steel scrap price assessments are published on the first publication date on or after the 15th of the calendar month.

Monthly stainless steel prices and monthly flat rolled coil and flat rolled surcharge prices are assessed and published before the first day of each calendar month, except when US or European markets are unsettled at the end of the month. In those cases, the assessments will be made as early in the month as practical.

US markets

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

European markets

Market information received after 5pm London time on the day of assessment may not be included in the assessment process.

Asia-Pacific Markets

Scrap market information received after 4pm Houston time and coil market information received after 5pm Beijing time on the day of assessment may not be included in the assessment process.

Ferro-alloys

Introduction

Argus Scrap Markets includes weekly ferro-alloys prices republished from Argus Non-Ferrous Markets.

See the [Argus Non-Ferrous Markets methodology](#).

Ferro-alloys prices

- Molybdenum oxide min 57% fob US warehouse
- Ferro-molybdenum min 65% Mo max 1.5% Si fob North America warehouse (per lb Mo)
- Ferro-titanium 70% Ti fob North America warehouse

Calculated price are produced for:

Cupro-nickel

- C70600 (90:10)
- C71500 (70:30)
- Monel 400 (R)

Super alloys

- Hastelloy C air melted
- Hastelloy X air melted
- Inconel 600 vacuum melted
- Inconel 601 vacuum melted
- Inconel 607 vacuum melted
- Inconel 625 vacuum melted
- Inconel 718 vacuum melted
- Waspaloy vacuum melted

Tool steel scrap

Argus Scrap Markets publishes calculated prices for tool steel scrap.

Prices are calculated by weighting the price of component and feedstock metals according to formulas developed from collaboration with the industry. Prices are calculated only on those days when one or more component price has changed. Prices are expressed as a low-high range and in US dollars per pound (lb).

Prices are assessed for

- H13
- M1
- M2
- M42
- T1
- T15

Weekly assessments

Assessments are for the named material meeting the lot size, timing and delivery criteria listed in the table below. Assessments are of the range in which repeatable trade took place or in which it could have taken place in the absence of transactions since the last assessment.

Market information received after 4pm Houston time on the day of assessment may not be included in the assessment process.

Cupro-nickel and super alloys scrap

Introduction

Argus Scrap Markets publishes weekly price assessments and daily calculated prices for super alloy and cupro-nickel scrap. Weekly price assessments are published each Thursday.

Calculated prices

Prices are calculated by weighting the price of component and feedstock metals according to formulas developed in collaboration with the industry. Formulas are revised monthly or as market conditions change. Prices are calculated only on those days when one or more component price has changed. Prices are expressed as a low-high range in US dollars per pound (lb).

Cupro-nickel and super alloys scrap specifications

Assessment	Quality	Minimum quantity	Currency/unit	Assessment frequency	Transacted/transactable	Timing	Basis
Super alloys scrap Invar solids, vacuum melted	UNS K93603 scrap solids, unprocessed	2,000lbs	\$/lb	weekly	since last assessment	30 days	del US
Cupro-nickel scrap Monel (R) turnings	UNS N04400 turnings, unprocessed	2,000lbs	\$/lb	weekly	since last assessment	30 days	del US
Cupro-nickel scrap Monel (K) solids	UNS N05500 solids, unprocessed	2,000lbs	\$/lb	weekly	since last assessment	30 days	del US

Minor metals

Introduction

Argus Scrap Markets includes weekly and monthly minor metals prices republished from Argus Non-Ferrous Markets.

See the [Argus Non-Ferrous Markets methodology](#).

Minor metals — weekly

Assessments are fob US warehouse, unless stated

- Silicon 5-5-3 min 98.5% Si (30 days) (\$/lb)
- Silicon 5-5-3 min 98.5% Si (90 days) (\$/lb)
- Tantalum scrap 99.9% vacuum melted del US consumer

Minor metals — monthly

- Chrome aluminothermic fob US warehouse
- Molybdenum scrap 99.7% airmelt del US consumer
- Molybdenum vacuum grade 99.7% del US vacuum consumer
- Molybdenum scrap 99.9% del US vacuum processor
- Nickel-Cobalt refinery scrap cobalt contained del US processor
- Nickel-Cobalt refinery scrap nickel contained del US processor
- Niobium (columbium) scrap vacuum del US consumer
- Niobium (columbium) scrap vacuum del US processor
- Titanium 6Al 4V ingot fob US producer
- Tungsten 99.9% scrap del US processor
- Tungsten 99.9% scrap solids consumer price fob US processor
- Tungsten carbide scrap inserts fob US processor
- Tungsten carbide scrap rounds fob US processor

Titanium scrap

Introduction

Argus Scrap Markets includes weekly titanium scrap prices republished from Argus Non-Ferrous Markets.

See the [Argus Non-Ferrous Markets methodology](#).

Titanium scrap — weekly, delivered US dealer/processor

- 6Al 4V bulk weldable
- 6Al 4V clips
- CP1 solids
- CP2 solids
- CP3/4 solids
- Min 85% Ti non-tin-bearing mixed turnings
- Min 85% Ti tin-bearing mixed turnings

Titanium scrap — twice weekly, delivered Europe

- Turnings 90/6/4 max 0.5% Sn ddp northwest Europe

Titanium scrap — weekly, delivered US processor

- 6Al 4V turnings aero quality
